ENGINE MANAGEMENT
GESTIÓN MOTOR

Pressure Sensors / Sensores de Presión **15xxx** - **CGM**
- **Intake manifold** / Colector de admisión
- **Supercharging** / Sobre alimentación
- **Brake assistant** / Servofreno
- **Common-rail** **156xx**
- **Hydraulic - Fuel** / Hidráulico - Combustible **156xx**
- **AC Pressure Sensor** / Presostato AC **158xx**

161xx - **CGM**
EGPS - Exhaust Gas Pressure Sensors
Sensores Presión Gas de Escape

33xxx - **CGM**
Temperature Sensors
Sensores Temperatura

44xxx
Oil Level Sensors
Sensores Nivel de Aceite

56xxx - **CEV**
Electric Valves
Electroválvulas

60xxx - **CGM**
Knock Sensors
Sensores de Detonación

68xxx - **CEGTS**
EGTS - Exhaust Gas Temperature Sensors
Sensores Temperatura Gases Escape

69xxx - **CGM**
MAFS - Mass Air Flow Sensor
Sensores Flujo Masa de Aire

711xx **COX**
XFour Oxygen Sensors
Sondas Lambda XFour

75xxx - **COX**
Wide Band Oxygen Sensors
Sondas Lambda Banda Ancha

756xx - 757xx - **COX**
AFR Oxygen Sensors
Sondas Lambda AFR

770xx - **COX**
Universal Oxygen Sensors / Optional Kit
Sondas Lambda Universales / Kit opcional

77xxx - **COX**
Specific Oxygen Sensors - Zirconia / Titanium
Sondas Lambda Específicas - Zirconio / Titanio

76xxx - 79xxx - **CGM**
Speed Sensors / Cam & Crankshaft Sensors (CMP&CKP)
Sensores Velocidad / Captadores de Impulsos (CMP&CKP)

IGNITION SYSTEM
SISTEMA ENCENDIDO

80xxx - 83xxx - 85xxx - 86xxx - **CE**
Ignition Coils / Ignition Cable Sets
Bobinas de Encendido / Juego de Cables de Encendido

70xxx - 71xxx - 74xxx - **CBP**
Termoplus - Glow plugs / Standard
Calentadores - Termoplus / Standard

73xxx - **CBP / CEV**
Diesel Stop Solenoids Switches
Solenoides - Electroválvulas

SWITCHES AND GADGETS
INTERRUPTORES Y GADGETS

14xxx - **Ci**
Oil and Air Pressure Sensors
Sensores de Presión de Aceite y Aire

16xxx - 17xxx - 18xxx - **Ci**
Pneumatic Switches
Manocontactos Neumáticos

185xx - **Ci**
High Pressure Switches
Interruptores Alta Presión

Switches / Manocontacto - **Ci**
- **Oil Pressure** / Presión de Aceite **10/11/12/13xxx**
- **Pneumatic** / Neumático **16/17/18xxx**

Switches / Interruptores - **Ci**
- **Hydraulic Stop** / Stop Hidráulico **20/21/22xxx**
- **Mechanical Stop** / Stop Mecánico **23/24/25xxx**
- **Pneumatic Stop** / Stop Neumático **26/27/28xxx**
- **Reversing Light** / Marcha Atrás **40/41xxx**
- **Embrague** / Clutch **24xxx**

61xxx - 62xxx - 63xxx - 64xxx - 65xxx
Dashboard Switches
Teclas y Pulsadores

67xxx - 98xxx - 99xxx - **Ci**

GENERAL CONDITIONS OF SALE AND RETURNS

To ensure that our customers always have access to the most up-to-date information, FAE publishes and maintains its General terms and conditions of sale and returns through its corporate website.

As these conditions may be subject to periodic review and updates, the information published on the website constitutes the current version and shall prevail over any text or reference contained in catalogues, brochures, price lists or previously issued commercial documentation.

Before making any enquiry relating to warranties, returns, terms of sale or administrative procedures, we recommend consulting the latest versions available at the following links:

GENERAL CONDITIONS OF SALE
https://www.fae.es/en/general-conditions-of-sale

WARRANTY RETURNS
https://www.fae.es/en/warranty-management

RETURNS POLICY
https://www.fae.es/en/returns-management

FAE products must be installed by qualified personnel in accordance with the relevant installation instructions and the vehicle manufacturer's specifications. The use of a product outside the recommended applications or incorrect installation may affect product performance and the applicable warranty coverage.

CONDICIONES GENERALES DE VENTA Y DEVOLUCIONES

Con el objetivo de garantizar que nuestros clientes dispongan siempre de la información más actualizada, FAE publica y mantiene vigentes sus Condiciones generales de venta y devoluciones a través de su página web corporativa.

Dado que dichas condiciones pueden ser objeto de revisión y actualización periódica, la información publicada en la web constituye la versión vigente y prevalece sobre cualquier texto o referencia incluidos en catálogos, folletos, tarifas o documentación comercial editada con anterioridad.

Antes de realizar cualquier consulta relacionada con garantías, devoluciones, condiciones de venta o procedimientos administrativos, recomendamos consultar las versiones actualizadas disponibles en los siguientes enlaces:

CONDICIONES GENERALES DE VENTA
www.fae.es/condiciones-generales-de-venta

CONDICIONES DE DEVOLUCIONES DE GARANTÍAS
https://www.fae.es/devoluciones-de-garantias

CONDICIONES DE DEVOLUCIONES
https://www.fae.es/devoluciones

Los productos FAE deben ser instalados por personal cualificado, siguiendo las instrucciones de montaje correspondientes y las especificaciones del fabricante del vehículo. La utilización del producto fuera de las aplicaciones recomendadas o una instalación incorrecta pueden afectar a su funcionamiento y a las coberturas de garantía aplicables.

CONDITIONS GÉNÉRALES DE VENTE ET DE RETOUR

Afin de garantir à nos clients l'accès permanent aux informations les plus récentes, FAE publie et met à jour ses Conditions générales de vente ainsi que sa de retour sur son site Internet officiel.

Ces conditions pouvant faire l'objet de révisions et de mises à jour périodiques, les informations publiées sur le site Internet constituent la version en vigueur et prévalent sur tout texte ou référence figurant dans des catalogues, brochures, tarifs ou documents commerciaux édités antérieurement.

Avant toute demande concernant les garanties, les retours, les conditions de vente ou les procédures administratives, nous vous recommandons de consulter les versions les plus récentes disponibles aux adresses suivantes :

CONDITIONS GÉNÉRALES DE VENTE
https://www.fae.es/fr/conditions-generales-de-vente

RETOURS DE GARANTIES
https://www.fae.es/fr/gestion-des-garanties

POLITIQUE DE RETOUR
https://www.fae.es/fr/gestion-des-retours

Les produits FAE doivent être installés par un personnel qualifié, conformément aux instructions de montage applicables et aux spécifications du constructeur du véhicule. L'utilisation d'un produit en dehors des applications recommandées ou une installation incorrecte peuvent affecter son fonctionnement et les garanties applicables.

WHEEL SPEED SENSORS INSTRUCTIONS

FAE products have the technology to replace and adapt to original equivalents. For reasons of safety, and so as to achieve optimal performance, all maintenance and repair work must be performed only by trained personnel in accordance with the vehicle manufacturer's guidelines and the assembly instructions for the **FAE** and/or original part. **FAE** will accept no liability for any installation by untrained personnel leading to a problem in the operation of the parts and/or the vehicle. Assembly and disassembly of the sensors must comply with the vehicle manufacturer's guidelines. Take note of the vehicle manufacturers' safety data sheets.

DISASSEMBLY:
Depending on the vehicle model, **FAE** recommends a thorough cleaning of the ABS sensor location and the former socket, using a brake cleaner and never compressed air to remove braking dust. Any kind of dust breathed in would be harmful to health.
Active sensors can be damaged by electrostatic discharges. The electrical contacts must therefore never be touched when active sensors are being handled.

- Release the sensor attachment.
- Unplug the electrical connection. Never pull at the sensor conductors directly.
- Remove the old ABS sensor.
- Clean the connection and the location where the new ABS sensor will be fitted.

ASSEMBLY:
- Install the new ABS sensor and secure it in accordance with the vehicle manufacturer's guidelines.
- Join up the electrical connection cables.
- Fit all the bushings in their specific location. If any bushings are not installed in place, then the cable could rub against a rotating element, causing wear and tear and subsequent breakage. The cables should never be twisted during assembly.
- Replace the tightness seal every time a sensor is changed. The seals may not remain tight if they are used or worn.

If necessary, delete the error code displayed. Check the anti-lock system again. Test route. The ABS control pilot should no longer light up.

INSTRUCCIONES SENSORES REVOLUCIONES RUEDA

Los productos **FAE** tienen la tecnología para reemplazar y adaptarse a los equivalentes de origen. Por razones de seguridad y para conseguir un rendimiento óptimo, todos los trabajos de mantenimiento y de reparación deben ser efectuados únicamente por personal con formación de acuerdo con las directivas del fabricante del vehículo, siguiendo las instrucciones de montaje de la pieza **FAE** y/o de origen. Cualquier montaje realizado por personal no formado que represente un problema en el funcionamiento de la pieza y/o del vehículo no será responsabilidad de **FAE**. Para el montaje y desmontaje de los sensores se respetarán las directivas del fabricante del vehículo. Prestar atención a las fichas de datos de seguridad de los fabricantes de vehículos.

DESMONTAJE:
Según el modelo del vehículo, **FAE** recomienda limpiar a fondo la ubicación del sensor ABS y el enchufe antiguo, utilizando un limpiador de frenos, no utilizar nunca aire comprimido para eliminar el polvo de freno. Cualquier clase de polvo que se respire es nocivo para la salud. Los sensores activos pueden ser dañados por descargas electroestáticas. Por ello no deben tocarse nunca los contactos eléctricos cuando se manipulen sensores activos.

- Soltar la fijación del sensor.
- Desenchufar la conexión eléctrica. Nunca deberá tirarse directamente de los conductores del sensor.
- Retirar el sensor ABS antiguo.
- Limpiar la conexión y el lugar de montaje del sensor ABS nuevo.

MONTAJE:
- Colocar el sensor ABS nuevo y fijarlo de acuerdo con las directivas del fabricante del vehículo.
- Unir los cables de la conexión de enchufe eléctrico.
- Montar todos los pasa-muros en su ubicación específica. Si algún pasa-muros no está colocado en su sitio, puede provocar el roce del cable con algún elemento de rotación que produciría el desgaste y posterior rotura del mismo. No deben retorcerse los cables durante el montaje.
- Sustituya la junta de estanqueidad cada vez que cambie un sensor. Las juntas pueden no realizar su función de hermeticidad si están usadas o desgatadas.

De ser necesario, borrar el código de error presente. Volver a comprobar el sistema antibloqueo. Recorrido de prueba. Ya no se debería encender el piloto de control del ABS.

INSTRUCTIONS CAPTEUR DE VITESSE ROUE

Les produits **FAE** incorporent la technologie pour remplacer et s'adapter aux équivalents d'origine. Pour des raisons de sécurité et pour obtenir un rendement optimal, tous les travaux de maintenance et de réparation ne doivent être effectués que par un personnel possédant la formation appropriée en vertu des directives du fabricant du véhicule, en suivant les instructions de montage de la pièce **FAE** et/ou d'origine. **FAE** se dégage de toute responsabilité quant à tout montage réalisé par un personnel non formé qui représente un problème dans le fonctionnement de la pièce et/ou du véhicule. Pour le montage et démontage des capteurs, il faudra respecter les directives du fabricant du véhicule. Il faut faire particulièrement attention aux fiches de données de sécurité des fabricants de véhicules.

DÉMONTAGE:
Selon le modèle du véhicule, **FAE** recommande de nettoyer à fond l'emplacement du capteur ABS et l'ancienne prise, en utilisant un produit de nettoyage pour freins. Ne jamais utiliser de l'air comprimé pour éliminer la poussière de frein. Toute classe de poussière pouvant être respirée est nocive pour la santé.
Les capteurs actifs peuvent être endommagés par des décharges électrostatiques. C'est pourquoi il ne faut jamais toucher les contacts électriques en manipulant les capteurs actifs.

- Détacher la fixation du capteur.
- Débrancher la connexion électrique. Il ne faudra jamais tirer directement les conducteurs du capteur.
- Retirer l'ancien capteur ABS.
- Nettoyer la connexion et le lieu de montage du nouveau capteur ABS.

MONTAGE:
- Placer le nouveau capteur ABS et le fixer conformément aux directives du fabricant du véhicule.
- Unir les câbles de la connexion de la prise électrique.
- Monter tous les isolateurs de traversée à leur endroit spécifique. Si un isolateur de traversée n'est pas placé à son endroit, ce fait peut provoquer que le câble frotte contre un élément de rotation, ce qui produirait son usure et ultérieure rupture. Ile ne faut pas tordre les câbles pendant le montage.
- Remplacer le joint d'étanchéité lors de chaque changement d'un capteur. Les joints peuvent ne pas réaliser leur fonction d'étanchéité s'ils sont usées ou en mauvais état.

Le cas échéant, effacer le code d'erreur présent. Vérifier à nouveau le système antiblocage. Parcours d'essai. Le voyant de contrôle de l'ABS ne devrait plus s'activer.

FAE

WHEEL SPEED SENSORS - ABS
SENSORES REVOLUCIONES RUEDA - ABS
CAPTEURS VITESSE ROTATION DE RUE - ABS

TECHNICAL INFORMATION

FUNCTION:

ABS (Anti-lock Braking System) or Wheel Speed Sensors, are mounted in the hub of the wheels and detect the rotational speed of each of them, transferring this information to the ABS control unit. If the ABS control unit detects a substantial drop in speed in one or more wheels, which could cause them to lock, it swiftly intervenes by modulating the braking pressure of each wheel individually. This prevents the wheels from locking and guarantees safe braking, allowing the driver to retain control of the vehicle.

The ABS sensors provide information not only for the system itself, but also for such other systems as the gearbox, satellite navigation systems, the TCS or ASR (Traction Control Systems), chassis control systems, the ESP (Electronic Stability Program) system or the incline control system, which likewise make use of it. Given the constant development of such sensors, there are today various different designs depending on precision, size and robsutness requirements.

FAE divides these sensors into 2 major groups:

Passive ABS sensors. For toothed wheels.

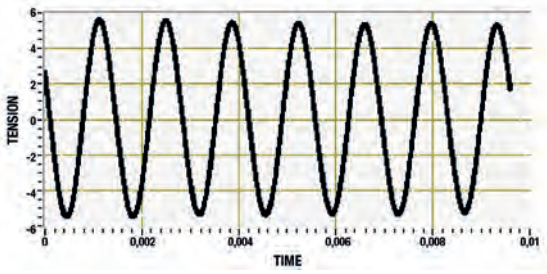
- Inductive ABS.

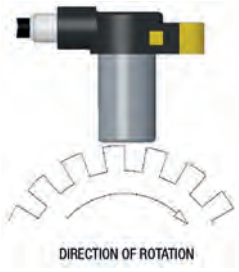
Active ABS sensors. For wheels with magnetic coding/toothed wheels.

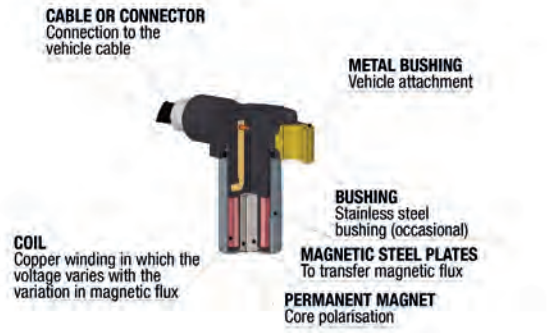
- Hall ABS.
- Hall ABS with magnetic coding ring.
- Magneto-resistive ABS.

Passive ABS sensors. For toothed wheels (INDUCTIVES).

Passive ABS sensors are typically larger, and do not begin to function until the wheel reaches a set minimum rotational speed. They comprise a coil wound around a magnetic core and a permanent magnet. The magnetic flow generated between the teeth and troughs of the wheel induce a sinusoidal output voltage proportional to the speed of the variations detected by the sensor. The voltage varies in accordance with the speed of rotation and the gap separating the toothed wheel, in both frequency and amplitude. These variations allow the following to be derived from the signal:



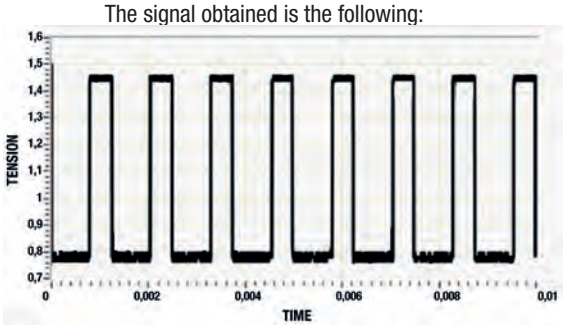




Active ABS sensors. For toothed/magnetic coder wheels.

Active ABS sensors are so named because they require an external power input in order to operate.
The response obtained from the sensor is a squared signal, the frequency being proportional to the rotational speed of the wheel. The amplitude of the signal does not depend on speed, while the detection technology allows for readings from 0 km/h.

The signal obtained is the following:

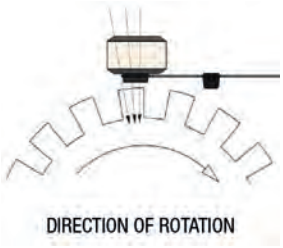


TECHNICAL INFORMATION

Hall ABS

These sensors are highly accurate and must be installed with great precision. They use a semiconductor sensor coupled to an electronic circuit protecting the sensor from possible voltage spikes, and a permanent magnet.

The operational principle is based on the so-called Hall effect, which comprises the generation of a voltage (the Hall voltage) transversal to the direction of the current in a conductor, when the action of a magnetic field is applied perpendicularly to it.



Hall ABS with magnetic coder ring

This shares the same principle as the toothed wheel, although the variation in the magnetic field is caused by the change in polarity of a sectionally magnetised wheel (coder disc). No permanent magnet is fitted, thereby reducing the size of the sensor. Space can be saved by fitting the magnetic ring within the wheel bearings.

Magneto-resistive ABS

Magneto-resistive sensors are scarcely sensitive to their position, which means that they can be positioned relatively far from the coder disc, and still transmit a reliable signal. These sensors allow a highly precise signal to be detected.
The sensor is mounted above a magnetic coder, its resistive properties varying in accordance with the magnetic field presented to it.
As a result of the variation in the internal resistance of the centre, the velocity and direction of rotation can be established.

VISUAL APPEARANCE AND REASONS FOR SENSOR FAILURE.
The outer body, connector and cables must be checked, together with the bushings, to ascertain they are in good condition.
Also check whether the detector reveals any cracks, dents or impacts which could have damaged it.
It should be borne in mind that in general a visual inspection is not sufficient to establish whether the part is functioning correctly or not, although it will help to make an initial diagnosis.
1- Cracks or breaks. Tension caused by mechanical stress.
2- Deformation and denting. Overheating of the sensor.
3- No signal. Cable broken by friction or excessive vibration, short-circuits, internal sensor breakage caused by mechanical or thermal stress.

SENSOR FAILURE SYMPTOMS.
- The ABS indicator lights up.
- Wheels lock during normal braking (only on cars with an electronic braking distributor).

SENSOR MAINTENANCE.
The wheel speed sensors are the components subjected to the greatest loads within the braking regulation system. They prevent the wheels from skidding and are responsible for ensuring stable vehicle road performance.
Check the specific sensor values during each service or every 25.000 km. Replace if the functional checks are no longer within the specified threshold values.

INFORMACIÓN TÉCNICA

FUNCIÓN:

Los sensores ABS (*Antilock Braking System*) o Sensores Revoluciones de la Rueda, van ubicados en el buje de las ruedas y detectan la velocidad de giro de cada una de ellas, transfiriendo esta información a la unidad de control del sistema ABS. Si la unidad de control del sistema ABS detecta que hay un descenso importante de velocidad en una o varias ruedas, lo que podría provocar que se bloquearan, interviene rápidamente modulando la presión de frenado de cada rueda individualmente. De este modo se evita que las ruedas se bloqueen y garantizan un frenado seguro, permitiendo al conductor mantener el control del vehículo.
No sólo el sistema ABS utiliza la información que sus sensores le proporcionan si no que otros sistemas, como las cajas de cambios, los sistemas de navegación, GPS, el sistema TCS, ASR (Sistemas de Control de la Tracción), los sistemas de control de chasis, el sistema ESP (Programa Electrónico de Estabilidad) o el control de ascenso de pendientes, también la usan.
Dado el desarrollo constante de estos sensores, en la actualidad podemos encontrar diferentes diseños dependiendo de las necesidades de precisión, tamaño y resistencia.

FAE desglosa estos sensores en 2 grandes grupos:

Sensores ABS pasivos. Para ruedas dentadas.

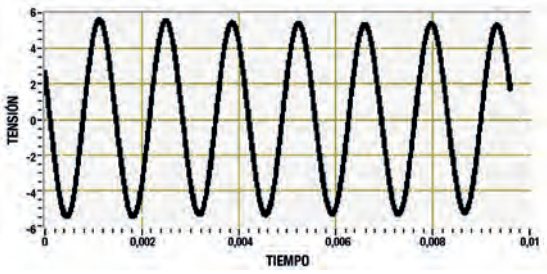
- ABS inductivos.

Sensores ABS activos. Para ruedas con codificador magnético/ruedas dentadas.

- ABS *Hall*.
- ABS *Hall* con anillo codificador magnético.
- ABS Magnetoresistivo.

Sensores ABS pasivos. Para ruedas dentadas (INDUCTIVOS).

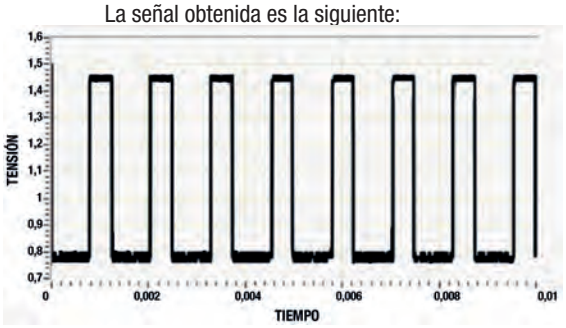
Los sensores ABS pasivos suelen ser más grandes, y no empiezan a funcionar hasta que la rueda no alcanza una velocidad rotacional mínima determinada. Se componen de una bobina que rodea un núcleo magnético y un imán permanente. El flujo magnético que se produce entre los dientes y los valles de la rueda, inducen una tensión sinusoidal de salida que es proporcional a la velocidad de las variaciones que detecta el sensor. La tensión varía en función de la velocidad de rotación y la distancia a la rueda dentada (Gap) tanto en frecuencia como en amplitud. Esas variaciones hacen que la señal que obtengamos sea la siguiente:



Sensores ABS activos. Para ruedas con codificador magnéticas/dentadas.

Los sensores ABS activos reciben este nombre porque precisan un aporte externo de energía para empezar a funcionar.
La respuesta que obtenemos del sensor es una señal cuadrada cuya frecuencia es proporcional a la velocidad de giro de la rueda. La amplitud de la señal no depende de la velocidad y además debido a la tecnología de detección es posible la lectura de la misma desde los 0 km/h.

La señal obtenida es la siguiente:

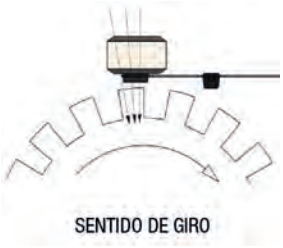


INFORMACIÓN TÉCNICA

ABS *Hall*

Estos sensores son muy precisos y deben instalarse con mucha exactitud. Se compone de un sensor semiconductor, acoplado a un circuito electrónico que protege el sensor de posibles picos de tensión y un imán permanente.

El principio de funcionamiento se basa en el llamado efecto *Hall*, que consiste en la generación de un voltaje transversal (tensión *Hall*) al sentido de la corriente en un conductor, cuando en él se le aplica perpendicularmente la acción de un campo magnético.



ABS *Hall* con anillo codificador magnético

Comparte el principio de la rueda dentada; sin embargo la variación del campo magnético se produce debido al cambio de polaridad de una rueda imantada por secciones (disco codificador). No lleva imán permanente por lo que se consigue reducir el tamaño del sensor. Se puede ahorrar más espacio integrando el anillo magnético dentro del cojinete de la rueda.

ABS Magnetoresistivo

Los sensores magnetoresistivos son prácticamente insensibles a su posición, lo que permite que se puedan colocar a distancias relativamente grandes del disco codificador y aun así transmitir una señal fiable. Estos sensores permiten detectar una señal muy precisa.
El sensor se monta encima del codificador magnético y varia sus propiedades resistivas en función del campo magnético que se le presenta. Debido a la variación de la resistencia interna de este sensor se pueden determinar la velocidad y el sentido de la rotación.

ASPECTOS VISUALES Y CAUSAS DE FALLO EN LOS SENSORES.
Debe verificarse el cuerpo exterior, el conector y los cables, así como sus pasa-muros, asegurándose de su buen estado.
Compruebe también si el captador muestra alguna grieta, abolladura o golpe que pudiera haberlo dañado.Hay que tener en cuenta que, como norma general, una inspección visual no es suficiente para poder asegurar el buen o mal funcionamiento de la pieza, pero ayuda a hacer un primer diagnóstico.
1- Grietas o roturas. Tensiones provocadas por estrés mecánico.
2- Deformaciones y abolladuras. Sobrecalentamiento del sensor.
3- Sin señal. Rotura del cable por fricción o exceso de vibración, cortocircuitos, roturas internas del sensor por estrés mecánico o térmico.

SÍNTOMAS DE FALLO DE LOS SENSORES.
- Encendido testigo de la luz ABS.
- Bloqueo de ruedas en frenadas normales (sólo en coches con repartidor de frenada electrónico).

MANTENIMIENTO DE LOS SENSORES.
Los sensores de revoluciones de la rueda son los componentes sometidos a las mayores cargas dentro del sistema de regulación del freno.
Evitan que las ruedas patinen y se encargan de proporcionar un comportamiento en carretera estable del automóvil.
Revisar en cada mantenimiento o cada 25.000 km los valores específicos de los sensores.
Reemplazar cuando las comprobaciones de funcionamiento no estén dentro de los valores límite especificados.

INFORMATION TECHNIQUE

FONCTION:

Les capteurs ABS (Antilock Braking System) ou capteurs de vitesse de roue, se trouvent dans la frette des roues et détectent la vitesse de rotation de chacune d'elles, puis transfère cette information à l'unité de contrôle du système ABS. Si l'unité de contrôle du système ABS capte qu'il se produit une baisse importante de vitesse sur une ou plusieurs roues, ce qui pourrait provoquer leur blocage, elle intervient rapidement en modulant la pression de freinage de chaque roue individuellement. Ainsi les roues ne se bloquent pas et garantissent un freinage sûr, ce qui permet au conducteur de conserver le contrôle du véhicule.
Le système ABS n'utilise non seulement l'information que lui envoient ses capteurs mais aussi d'autres systèmes, comme la boîte de vitesses, les systèmes de navigation, GPS, le système TCS, ASR (Systèmes de Contrôle de la Traction), les systèmes de contrôle de châssis, le système ESP (Programme Électronique de Stabilité) ou le contrôle de montée de pentes.
Étant donné le développement constant de ces capteurs, nous pouvons actuellement trouver différentes conceptions en fonction des besoins de précision, taille et résistance.

FAE divise ces capteurs dans 2 grandes groupes:

Capteurs ABS passifs. Pour les roues dentées.

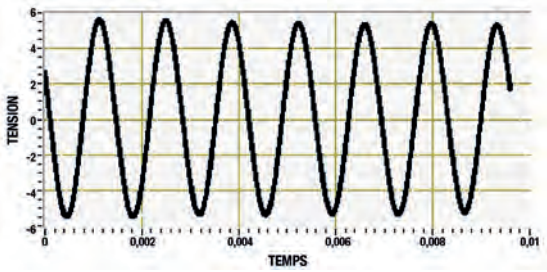
- ABS inductifs.

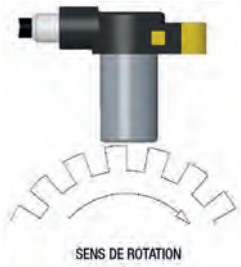
Capteurs ABS actifs. Pour les roues avec codificateur magnétique/roues dentées.

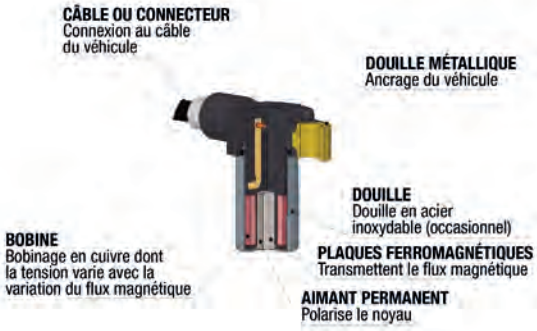
- ABS Hall.
- ABS Hall avec bague de codeur magnétique.
- ABS Magnétorésistif.

Capteurs ABS passifs. Pour les roues dentées (INDUCTIFS).

Les capteurs ABS passifs sont habituellement plus grands, et ne commencent à fonctionner que lorsque la roue atteint une vitesse rotationnelle minimale établie. Ils se composent d'une bobine qui entoure un noyau magnétique et un aimant permanent. Le flux magnétique qui se produit entre les dents et les creux de la roue induisent une tension sinusoïdale de sortie qui est proportionnelle à la vitesse des variations que détecte le capteur. La tension varie en fonction de la vitesse de rotation et la distance à la roue dentée (Gap) aussi bien en fréquence qu'en ampleur. Ces variations font que le signal que nous obtenons soit le suivant :



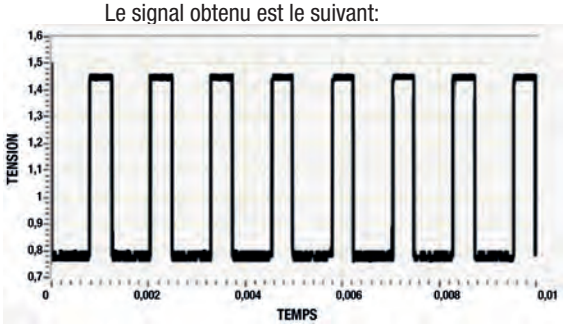




Capteurs ABS actifs. Pour les roues avec codificateur magnétique/roues dentées.

Les capteurs ABS actifs portent ce nombre car ils ont besoin d'un apport externe d'énergie pour commencer à fonctionner.
La réponse que nous obtenons du capteur est un signal carré dont la fréquence est proportionnelle à la vitesse de rotation de la roue. L'ampleur du signal ne dépend pas de la vitesse et, en outre, en raison de la technologie de détections, il est possible de le lire depuis 0 km/h.

Le signal obtenu est le suivant:

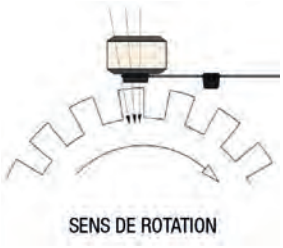


INFORMATION TECHNIQUE

ABS Hall

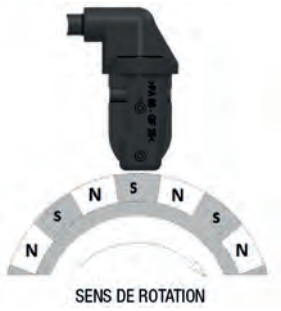
Ces capteurs sont très précis et doivent être installés avec une grande exactitude. Il se compose d'un capteur semi-conducteur, accouplé à un circuit électronique qui protège le capteur de possibles pics de tension et d'un aimant permanent.

Le principe de fonctionnement se fonde sur le dénommé effet Hall, qui consiste dans la génération d'un voltage transversal (tension Hall) au sens du courant dans un conducteur, quand lui est appliquée perpendiculairement l'action d'un champ magnétique.



ABS Hall avec bague de codeur magnétique

Il partage le principe de la roue dentée; toutefois, la variation du champ magnétique se produit à cause du changement de polarité d'une roue aimantée par sections (disque codeur). Il n'incorpore pas d'aimant permanent, c'est pourquoi la taille du capteur est réduite. Il est possible d'économiser plus d'espace en intégrant la bague magnétique dans le coussinet de la roue.



ABS Magnétorésistif

Les capteurs magnétorésistifs sont pratiquement insensibles à leur position, ce qui permet de les placer à des distances relativement grandes du disque codificateur tout en transmettant quand même un signal fiable. Ces capteurs permettent de détecter un signal très précis. Le capteur est monté sur le codificateur magnétique et varie ses propriétés résistives en fonction du champ magnétique qui se présente à lui. Grâce à la variation de la résistance interne de ce capteur, il est possible de déterminer la vitesse et le sens de la rotation.

ASPECTS VISUELS ET CAUSES DE DÉFAUT DES CAPTEURS.
Il faut vérifier le corps extérieur, le connecteur et les câbles, ainsi que leurs isolateurs de traversée, en s'assurant de leur bon état.
Il faut aussi vérifier si le capteur montre des fissures, bosselures ou coups pouvant l'avoir endommagé.
Il ne faut pas oublier, comme règle générale, qu'une inspection visuelle n'est pas suffisante pour garantir le bon ou mauvais fonctionnement de la pièce, mais elle aide à établir un premier diagnostic.
1- Fissures ou ruptures. Tensions provoquées par stress mécanique.
2- Déformations et bosselures. Surchauffe du capteur.
3- Sans signal. Rupture du câble par friction ou excès de vibration, courts-circuits, ruptures internes du capteur pour stress mécanique ou thermique.

SYMPTÔMES DE DÉFAUT DES CAPTEURS.
- Activation du témoin lumineux ABS.
- Blocage des roues lors de freinages normaux (uniquement pour des voitures avec distributeur de freinage électronique).

MAINTENANCE DES CAPTEURS.
Les capteurs de vitesse de roue sont les composants soumis aux plus grandes charges dans le système de régulation du frein. Ils évitent que les roues patinent et se chargent de fournir un comportement stable de l'automobile sur la route.
Réviser lors de chaque maintenance ou tous les 25.000 km les valeurs spécifiques des capteurs. Remplacer si les vérifications de fonctionnement se trouvent hors des valeurs limites spécifiées.

The FAE references that are highlighted in green are those whose applications are most respectful to the environment, vehicles that run on compressed natural gas (CNG), liquefied petroleum gas (LPG), ethanol or electricity, as they do not contribute to an increase in pollution.
Destacamos con la señal verde todas aquellas referencias **FAE** que tienen las aplicaciones más respetuosas con el medioambiente, vehículos que funcionan con gas natural comprimido (GNC), gas licuado del petróleo (GLP), etanol o eléctricos, ya que ayudan a no aumentar la contaminación.
Avec le signal vert, nous mettons en avant toutes ces références **FAE** qui disposent des applications les plus respectueuses de l'environnement, les véhicules fonctionnant au gaz naturel comprimé (GNC), au gaz de pétrole liquéfié (GPL), à l'éthanol ou les véhicules électriques, puisqu'ils évitent l'augmentation de la pollution.

With	Con	Avec
With 3rd seating row	Con 3 hileras de asientos	Avec 3ième rangée de sièges
With ABS	Con ABS	Pour véhicules avec système antiblocage
With Active City Stop	Con Active City Stop	Pour véhicule avec Active City Stop
With active steering	Con dirección activa	Avec direction active
With ADS	Con ADS	Pour véhicules avec ADS
With ASR	Con ASR	Pour véhicules avec ASR
With autom. distance control	Con regulación de distancia automática	Avec régulation de distance
With cable	Con cable	Avec câble
With catalytic converter	Con catalizador	Avec catalyseur
With collision warning system	Con aviso de colisión	Avec système anti-collision
With distance regulating cruise control	Con tempomat regulador de distancia	Avec radar de régulation de distance
With DSC	Con DSC	Pour véhicules avec DSC
With duplex brakes	Con frenos duplex	Avec frein duplex
With electronic suspension control	Con regulación eléctrica de amortiguación	Avec réglage d'amortisseur électronique
With ESP	Con ESP	Pour véhicules avec ESP
With FlexRide suspension	Con suspensión FlexRide	Avec châssis FlexRide
With headlamp (mechanical)	Con regulación alcance luces (mecánica)	Pour véhicules avec réglage mécanique inclinaison phares
With heavy duty suspension	Con chasis reforzado	Pour véhicules avec châssis renforcé
With lane change assistant	Con asistente de cambio de carril	Avec assistance pour changement de voie
With lane changing assist	Con asistente de cambio de carril	Avec assistance pour changement de voie
With levelling control	Con regulación de nivel	Pour véhicules avec régulation de niveau
With park assist system	Con auxiliar de aparcamiento	Avec parctronic
With power steering	Con dirección asistida	Avec direction assistée
With Tempomat	Con Tempomat	Avec régulateur de vitesse
With track widening	Para vehículos con ampliación ancho de vía	Avec écartement des roues élargi
Without	Sin	Sans
Without accelerator pedal sensor	Sin sensor acelerador	Pour véhicules sans capteur de la pédale d'accélérateur
Without Active City Stop	Sin Active City Stop	Pour véhicule sans Active City Stop
Without active steering	Sin dirección activa	Sans direction active
Without ADS	Sin ADS	Pour véhicules sans ADS
Without ASR	Sin ASR	Pour véhicules sans ASR
Without autom. distance control	Sin regulación automática de distancia	Sans régulation de distance
Without cable	Sin cables	Sans câbles
Without check control	Sin panel de control	Sans table de commande
Without collision warning system	Sin aviso de colisión	Sans système anti-collision
Without drive assistance system	Sin asistencia de conducción	Sans système d'aide à la conduite
Without DSC	Sin DSC	Pour véhicules sans DSC
Without electronic suspension control	Sin regulación eléctrica de la amortiguac.	Sans réglage d'amortisseur électronique
Without ESP	Sin ESP	Pour véhicules sans ESP
Without fitted towbar	Sin barra de remolque equipada	Sans barre de remorquage
Without FlexRide suspension	Sin suspensión FlexRide	Sans châssis FlexRide
Without four wheel steering	Sin dirección en las 4 ruedas	Sans direction par quatre roues
Without four wheel steering	Sin dirección en las 4 ruedas	Sans direction par quatre roues
Without headlamp	Sin regulación del alcance de luces	Pour véhicules sans réglage de l'inclinaison des phares
Without headlamp (mechanical)	Sin regulación alcance luces (mecánica)	Pour véhicules sans réglage mécanique inclinaison phares
Without heavy duty suspension	Sin chasis reforzado	Pour véhicules sans châssis renforcé
Without hill start assist	Sin auxiliar de ascenso	Sans aide au démarrage en pente
Without lane change assistant	Sin asistente de cambio de carril	Sans assistance pour changement de voie
Without park assist system	Sin auxiliar de aparcamiento	Sans parctronic
Without power brake	Sin servo freno	Sans servo frein
Without standard suspension	Sin suspensión estándar	Sans châssis standard
Without Tempomat	Sin Tempomat	Sans régulateur de vitesse
Without track widening	Para vehículos sin ampliación ancho de vía	Sans écartement des roues élargi

INFORMATION / INFORMACIÓN / INFORMATION

G.B.

This catalog considers vehicles with:

- Left Hand Drive (L.H.D.).
- Manual Gear, 5 speed.
- Without Air Conditioning.
- Without Check Control.
- Without Cruise Control.
- Without ABS.

As the Standard vehicle (generic).

Vehicles with different features (criteria) are treated in a specific way in the information column.

E

En este catálogo se han considerado vehículos con:

- Conducción a la izquierda (L.H.D.).
- Cambio Manual, 5 velocidades.
- Sin Aire Acondicionado.
- Sin Check Control.
- Sin Cruise Control.
- Sin ABS.

Como el vehículo Standard (genérico).

El resto de vehículos con otras características (criterios) se tratan de forma específica en la columna de información.

F

Dans ce catalogue sont considérés les véhicules avec:

- Conduction à gauche (L.H.D.).
- Avec boîte de vitesses manuelle, 5 vitesses.
- Sans Air Conditionné/Climatisation.
- Sans Tableau de Contrôle.
- Sans Vitesse de Croisière.
- Sans Antiblocage (ABS).

Comme le véhicule Standard (générique).

Le reste des véhicules avec d'autres caractéristiques (critères) sont abordés d'une façon spécifique dans la colonne d'information.
