INTRODUCTION / WARRANTY

FAE considers quality as a top priority, which is why we are immersed in a continuous improvement, promoting the use of the most advanced methods for project design and manufacturing of our products, such as Computer Aided Design (CAD), automated controls and processes, to obtain reliability tests, etc., allowing us to overcome successfully our client's quality audits, and even developing jointly new products for their new vehicles. With this catalogue, we intend to help our clients in the rapid identification of our products.

Due to the constant variations made by vehicle manufacturers, we cannot ensure the full accuracy of the information indicated in this **FAE** catalogue, which should be used only as a guide.

Names and references of the manufactures serve only to help you find more quickly our products.

WARRANTY:

FAE guarantees all products against any manufacturing defects. This guarantee is limited to the replacement of faulty parts. **FAE** does not hold itself responsible for the improper use of the product by untrained and non-skilled personnel. Any **FAE** product installed in applications not specified in this catalog will not be subject to warranty.

NOTES:

REFUND POLICY - FAE controls 100% the production of all its products, checks and saves all manufacturing information. **FAE** does not refund any article which has been taken out of its heat sealed plastic wrap.

- **FAE** does not accept any return of material, after a period of 15 days from the date of delivery. The return is subject of revision by **FAE**.
- **FAE** will refer to the Court of Barcelona in case of litigation.
- **FAE** reserves the right to modify the characteristics of its products without prior warning.

FAE products have the technology to replace and adapt to the original equivalent and must be installed by skilled specialist, having technical vehicle assembly knowledge and following **FAE** or the original manufacturer's instructions. Installments of **FAE** parts by a non-skilled specialist which lead to a problem in the correct functioning of the part and/or the vehicle, will not be **FAE**'s responsibility.

INTRODUCCIÓN / GARANTÍA

FAE considera la calidad como un objetivo prioritario, y por ello, estamos inmersos en una mejora continua, promoviendo la aplicación de los medios más innovadores para el proyecto y fabricación de nuestros productos, como son el Diseño Asistido por Ordenador (CAD), la automatización de controles y procesos para obtener ensayos de fiabilidad, etc., que nos permiten superar con éxito las auditorías de calidad de nuestros clientes, llegando a desarrollar conjuntamente productos para sus nuevos vehículos. Con este catálogo, pretendemos ayudar a nuestros clientes en la rápida identificación de los productos de nuestra fabricación. Debido a las constantes variaciones de los fabricantes de vehículos, no podemos garantizar la completa exactitud de la información que se indica en este catálogo de **FAE**, sirviendo únicamente como guía. Los nombres y referencias de los fabricantes sirven únicamente para ayudar a encontrar más rápidamente nuestros productos.

GARANTÍA:

FAE garantiza todos los productos contra fallos de fabricación. La garantía se limita al cambio del producto defectuoso, **FAE** no cubre la mala aplicación o manipulación del mismo por personal no especializado. Cualquier producto **FAE** instalado en aplicaciones no especificadas en este catálogo no estará sujeto a garantía.

NOTAS:

DEVOLUCIÓN- FAE controla al 100% la producción de todos sus productos, comprueba y guarda la información del comportamiento de cada uno de ellos en el momento de su fabricación. Si cualquier producto ha sido extraído de su envoltorio de plástico, que va termo-sellado, no se podrá aceptar su devolución.

- **FAE** no aceptará ninguna devolución de material transcurridos 15 días de la fecha de suministro. Condicionado a la revisión del material devuelto.
- **FAE** ante cualquier tipo de litigio se remite a los Tribunales de Barcelona.
- **FAE** se reserva el derecho a modificar las características de sus productos sin previo aviso.

Los productos **FAE** tienen la tecnología para reemplazar y adaptarse a los equivalentes de origen y deben ser montados por personal especializado y con conocimientos en el montaje de componentes del vehículo, siguiendo las instrucciones de montaje de la pieza **FAE** y/o del origen. Cualquier montaje realizado por personal no especializado que represente un problema en el funcionamiento de la pieza y/o del vehículo no será responsabilidad de **FAE**.

INTRODUCTION / GARANTIE

FAE conçoit la qualité comme un objectif prioritaire, pour cela, nous nous engageons à améliorer constamment notre manière de faire, en utilisant au possible les moyens les plus modernes dans le développement et la fabrication de nos produits, tels que la conception assistée par ordinateur (CAD), l'automatisation des contrôles et des processus pour obtenir des tests de fiabilité, etc. Cela nous permet de passer avec succès les contrôles qualité de nos clients et de développer même avec eux des nouveaux produits pour leurs tous derniers véhicules. Nous avons faits en sorte que ce catalogue aide nos clients à identifier rapidement les produits de notre fabrication.

Etant données les fréquentes modifications des fabricants de véhicules, nous ne pouvons pas garantir la complète exactitude des informations apportées par ce catalogue **FAE** qui doit seulement être considéré comme un guide. Ainsi les noms et références des fabricants sont mentionnés dans l'unique but de faciliter la recherche de nos produits.

GARANTIE :

FAE garantie ses produits contre tout défaut de fabrication. La garantie est limitée au remplacement de la pièce défectueuse et ne couvre pas sa mauvaise installation ou encore la fausse manipulation de celle-ci par personnel non formé. Tout produit **FAE** installé dans des applications non spécifiées dans ce catalogue ne sera pas couvert par la garantie.

REMARQUES :

REMBOURSEMENT- FAE contrôle à 100% la production de tous ses produits. Nous vérifions et gardons toutes les informations concernant leur comportement lors de la fabrication. Dès lors que n'importe quel produit a été extrait de son emballage plastique étanche, nous ne procédons à aucun remboursement.

- **FAE** décline tout retour du matériel, après 15 jours à compter de la date de livraison. Le retour sera soumis à une révision par **FAE**.
- **FAE** s'en remettra aux Tribunaux de Barcelone en cas de litige.
- **FAE** se réserve le droit de modifier les caractéristiques de ses produits sans aucun avis préalable.

Les produits **FAE** ont la technologie pour remplacer et s'adapter à leurs équivalents d'origine. Ils doivent être assemblés par personnel qualifié et compétent dans l'ensemble des composants du véhicule, suivant les instructions de montage de la pièce **FAE** et/ou de l'origine. Tout assemblage par personnel non qualifié qui représente un problème dans le fonctionnement de la pièce et/ou du véhicule ne sera pas de la responsabilité de **FAE**.

WHEEL SPEED SENSORS INSTRUCTIONS

FAE products have the technology to replace and adapt to original equivalents. For reasons of safety, and so as to achieve optimal performance, all maintenance and repair work must be performed only by trained personnel in accordance with the vehicle manufacturer's guidelines and the assembly instructions for the **FAE** and/or original part. **FAE** will accept no liability for any installation by untrained personnel leading to a problem in the operation of the parts and/or the vehicle. Assembly and disassembly of the sensors must comply with the vehicle manufacturer's guidelines. Take note of the vehicle manufacturers' safety data sheets.

DISASSEMBLY:

Depending on the vehicle model, **FAE** recommends a thorough cleaning of the ABS sensor location and the former socket, using a brake cleaner and never compressed air to remove braking dust. Any kind of dust breathed in would be harmful to health.

Active sensors can be damaged by electrostatic discharges. The electrical contacts must therefore never be touched when active sensors are being handled.

- Release the sensor attachment.
- Unplug the electrical connection. Never pull at the sensor conductors directly.
- Remove the old ABS sensor.
- Clean the connection and the location where the new ABS sensor will be fitted.

ASSEMBLY:

- Install the new ABS sensor and secure it in accordance with the vehicle manufacturer's guidelines.
- Join up the electrical connection cables.
- Fit all the bushings in their specific location. If any bushings are not installed in place, then the cable could rub against a rotating element, causing wear and tear and subsequent breakage. The cables should never be twisted during assembly.
- Replace the tightness seal every time a sensor is changed. The seals may not remain tight if they are used or worn.

If necessary, delete the error code displayed. Check the anti-lock system again. Test route. The ABS control pilot should no longer light up.

INSTRUCCIONES SENSORES REVOLUCIONES RUEDA

Los productos **FAE** tienen la tecnología para reemplazar y adaptarse a los equivalentes de origen. Por razones de seguridad y para conseguir un rendimiento óptimo, todos los trabajos de mantenimiento y de reparación deben ser efectuados únicamente por personal con formación de acuerdo con las directivas del fabricante del vehículo, siguiendo las instrucciones de montaje de la pieza **FAE** y/o de origen. Cualquier montaje realizado por personal no formado que represente un problema en el funcionamiento de la pieza y/o del vehículo no será responsabilidad de **FAE**. Para el montaje y desmontaje de los sensores se respetarán las directivas del fabricante del vehículo. Prestar atención a las fichas de datos de seguridad de los fabricantes de vehículos.

DESMONTAJE:

Según el modelo del vehículo, **FAE** recomienda limpiar a fondo la ubicación del sensor ABS y el enchufe antiguo, utilizando un limpiador de frenos, no utilizar nunca aire comprimido para eliminar el polvo de freno. Cualquier clase de polvo que se respire es nocivo para la salud. Los sensores activos pueden ser dañados por descargas electroestáticas. Por ello no deben tocarse nunca los contactos eléctricos cuando se manipulen sensores activos.

- Soltar la fijación del sensor.
- Desenchufar la conexión eléctrica. Nunca deberá tirarse directamente de los conductores del sensor.
- Retirar el sensor ABS antiguo.
- Limpiar la conexión y el lugar de montaje del sensor ABS nuevo.

MONTAJE:

- Colocar el sensor ABS nuevo y fijarlo de acuerdo con las directivas del fabricante del vehículo.
- Unir los cables de la conexión de enchufe eléctrico.
- Montar todos los pasa-muros en su ubicación específica. Si algún pasa-muros no está colocado en su sitio, puede provocar el roce del cable con algún elemento de rotación que produciría el desgaste y posterior rotura del mismo. No deben retorcerse los cables durante el montaje.
- Sustituya la junta de estanqueidad cada vez que cambie un sensor. Las juntas pueden no realizar su función de hermeticidad si están usadas o desgastadas.

De ser necesario, borrar el código de error presente. Volver a comprobar el sistema antibloqueo. Recorrido de prueba. Ya no se debería encender el piloto de control del ABS.

INSTRUCTIONS CAPTEUR DE VITESSE ROUE

Les produits **FAE** incorporent la technologie pour remplacer et s'adapter aux équivalents d'origine. Pour des raisons de sécurité et pour obtenir un rendement optimal, tous les travaux de maintenance et de réparation ne doivent être effectués que par un personnel possédant la formation appropriée en vertu des directives du fabricant du véhicule, en suivant les instructions de montage de la pièce **FAE** et/ou d'origine. **FAE** se dégage de toute responsabilité quant à tout montage réalisé par un personnel non formé qui représente un problème dans le fonctionnement de la pièce et/ou du véhicule. Pour le montage et démontage des capteurs, il faudra respecter les directives du fabricant du véhicule. Il faut faire particulièrement attention aux fiches de données de sécurité des fabricants de véhicules.

DÉMONTAGE:

Selon le modèle du véhicule, **FAE** recommande de nettoyer à fond l'emplacement du capteur ABS et l'ancienne prise, en utilisant un produit de nettoyage pour freins. Ne jamais utiliser de l'air comprimé pour éliminer la poussière de frein. Toute classe de poussière pouvant être respirée est nocive pour la santé.

Les capteurs actifs peuvent être endommagés par des décharges électrostatiques. C'est pourquoi il ne faut jamais toucher les contacts électriques en manipulant les capteurs actifs.

- Détacher la fixation du capteur.
- Débrancher la connexion électrique. Il ne faudra jamais tirer directement les conducteurs du capteur.
- Retirer l'ancien capteur ABS.
- Nettoyer la connexion et le lieu de montage du nouveau capteur ABS.

MONTAGE:

- Placer le nouveau capteur ABS et le fixer conformément aux directives du fabricant du véhicule.
- Unir les câbles de la connexion de la prise électrique.
- Monter tous les isolateurs de traversée à leur endroit spécifique. Si un isolateur de traversée n'est pas placé à son endroit, ce fait peut provoquer que le câble frotte contre un élément de rotation, ce qui produirait son usure et ultérieure rupture. Il ne faut pas tordre les câbles pendant le montage.
- Remplacer le joint d'étanchéité lors de chaque changement d'un capteur. Les joints peuvent ne pas réaliser leur fonction d'étanchéité s'ils sont usés ou en mauvais état.

Le cas échéant, effacer le code d'erreur présent. Vérifier à nouveau le système antibloqueo. Parcours d'essai. Le voyant de contrôle de l'ABS ne devrait plus s'activer.

WHEEL SPEED SENSORS - ABS
SENSORES REVOLUCIONES RUEDA - ABS
CAPTEURS VITESSE ROTATION DE RUE - ABS

TECHNICAL INFORMATION

FUNCTION:

ABS (Anti-lock Braking System) or Wheel Speed Sensors, are mounted in the hub of the wheels and detect the rotational speed of each of them, transferring this information to the ABS control unit. If the ABS control unit detects a substantial drop in speed in one or more wheels, which could cause them to lock, it swiftly intervenes by modulating the braking pressure of each wheel individually. This prevents the wheels from locking and guarantees safe braking, allowing the driver to retain control of the vehicle.

The ABS sensors provide information not only for the system itself, but also for such other systems as the gearbox, satellite navigation systems, the TCS or ASR (Traction Control Systems), chassis control systems, the ESP (Electronic Stability Program) system or the incline control system, which likewise make use of it. Given the constant development of such sensors, there are today various different designs depending on precision, size and robustness requirements.

FAE divides these sensors into 2 major groups:

Passive ABS sensors. For toothed wheels.

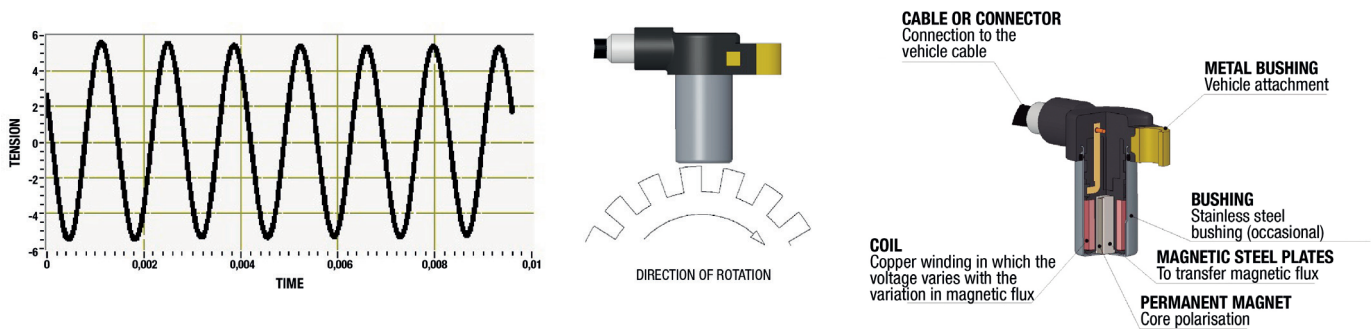

- Inductive ABS.

Active ABS sensors. For wheels with magnetic coding/toothed wheels.

- Hall ABS.
- Hall ABS with magnetic coding ring.
- Magneto-resistive ABS.

Passive ABS sensors. For toothed wheels (INDUCTIVES).

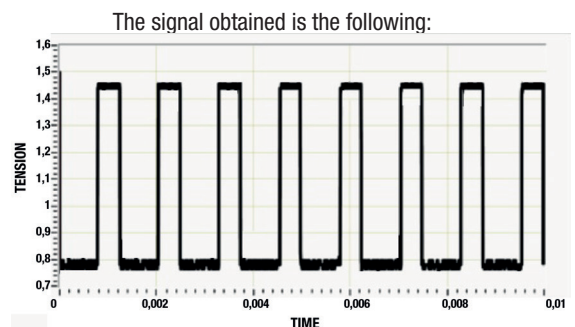

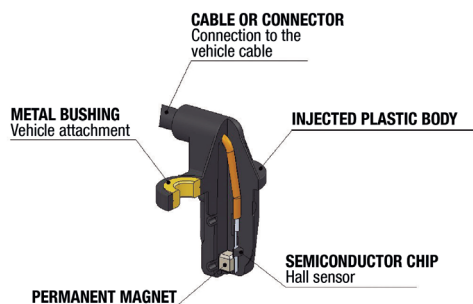

Passive ABS sensors are typically larger, and do not begin to function until the wheel reaches a set minimum rotational speed. They comprise a coil wound around a magnetic core and a permanent magnet. The magnetic flow generated between the teeth and troughs of the wheel induce a sinusoidal output voltage proportional to the speed of the variations detected by the sensor. The voltage varies in accordance with the speed of rotation and the gap separating the toothed wheel, in both frequency and amplitude. These variations allow the following to be derived from the signal:

Active ABS sensors. For toothed/magnetic coder wheels.

Active ABS sensors are so named because they require an external power input in order to operate.

The response obtained from the sensor is a squared signal, the frequency being proportional to the rotational speed of the wheel. The amplitude of the signal does not depend on speed, while the detection technology allows for readings from 0 km/h.

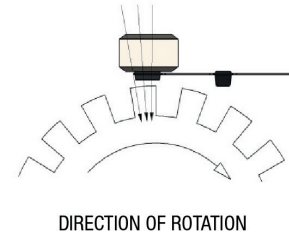

TECHNICAL INFORMATION

Hall ABS

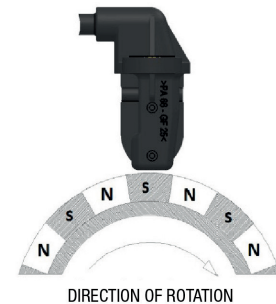

These sensors are highly accurate and must be installed with great precision. They use a semiconductor sensor coupled to an electronic circuit protecting the sensor from possible voltage spikes, and a permanent magnet.

The operational principle is based on the so-called Hall effect, which comprises the generation of a voltage (the Hall voltage) transversal to the direction of the current in a conductor, when the action of a magnetic field is applied perpendicularly to it.

Hall ABS with magnetic coder ring

This shares the same principle as the toothed wheel, although the variation in the magnetic field is caused by the change in polarity of a sectionally magnetised wheel (coder disc). No permanent magnet is fitted, thereby reducing the size of the sensor. Space can be saved by fitting the magnetic ring within the wheel bearings.

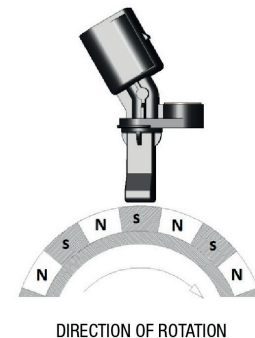

Magneto-resistive ABS

Magneto-resistive sensors are scarcely sensitive to their position, which means that they can be positioned relatively far from the coder disc, and still transmit a reliable signal. These sensors allow a highly precise signal to be detected.

The sensor is mounted above a magnetic coder, its resistive properties varying in accordance with the magnetic field presented to it.

As a result of the variation in the internal resistance of the centre, the velocity and direction of rotation can be established.

VISUAL APPEARANCE AND REASONS FOR SENSOR FAILURE.

The outer body, connector and cables must be checked, together with the bushings, to ascertain they are in good condition.

Also check whether the detector reveals any cracks, dents or impacts which could have damaged it.

It should be borne in mind that in general a visual inspection is not sufficient to establish whether the part is functioning correctly or not, although it will help to make an initial diagnosis.

- 1- Cracks or breaks. Tension caused by mechanical stress.
- 2- Deformation and denting. Overheating of the sensor.
- 3- No signal. Cable broken by friction or excessive vibration, short-circuits, internal sensor breakage caused by mechanical or thermal stress.

SENSOR FAILURE SYMPTOMS.

- The ABS indicator lights up.
- Wheels lock during normal braking (only on cars with an electronic braking distributor).

SENSOR MAINTENANCE.

The wheel speed sensors are the components subjected to the greatest loads within the braking regulation system. They prevent the wheels from skidding and are responsible for ensuring stable vehicle road performance.

Check the specific sensor values during each service or every 25.000 km. Replace if the functional checks are no longer within the specified threshold values.

INFORMACIÓN TÉCNICA

FUNCIÓN:

Los sensores ABS (*Antilock Braking System*) o Sensores Revoluciones de la Rueda, van ubicados en el buje de las ruedas y detectan la velocidad de giro de cada una de ellas, transfiriendo esta información a la unidad de control del sistema ABS. Si la unidad de control del sistema ABS detecta que hay un descenso importante de velocidad en una o varias ruedas, lo que podría provocar que se bloquearan, interviene rápidamente modulando la presión de frenado de cada rueda individualmente. De este modo se evita que las ruedas se bloqueen y garantizan un frenado seguro, permitiendo al conductor mantener el control del vehículo. No sólo el sistema ABS utiliza la información que sus sensores le proporcionan si no que otros sistemas, como las cajas de cambios, los sistemas de navegación, GPS, el sistema TCS, ASR (Sistemas de Control de la Tracción), los sistemas de control de chasis, el sistema ESP (Programa Electrónico de Estabilidad) o el control de ascenso de pendientes, también la usan.

Dado el desarrollo constante de estos sensores, en la actualidad podemos encontrar diferentes diseños dependiendo de las necesidades de precisión, tamaño y resistencia.

FAE desglosa estos sensores en 2 grandes grupos:

Sensores ABS pasivos. Para ruedas dentadas.

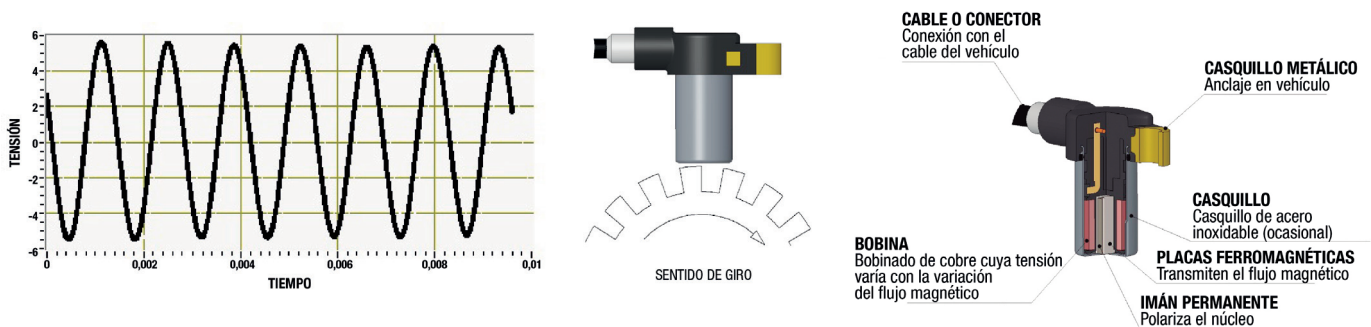

- ABS inductivos.

Sensores ABS activos. Para ruedas con codificador magnético/ruedas dentadas.

- ABS Hall.
- ABS Hall con anillo codificador magnético.
- ABS Magneto-resistivo.

Sensores ABS pasivos. Para ruedas dentadas (INDUCTIVOS).

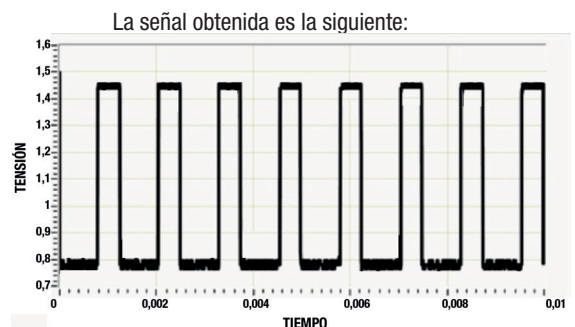

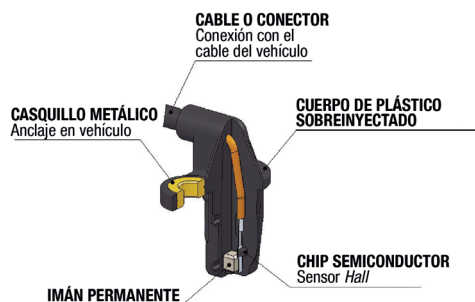

Los sensores ABS pasivos suelen ser más grandes, y no empiezan a funcionar hasta que la rueda no alcanza una velocidad rotacional mínima determinada. Se componen de una bobina que rodea un núcleo magnético y un imán permanente. El flujo magnético que se produce entre los dientes y los valles de la rueda, inducen una tensión sinusoidal de salida que es proporcional a la velocidad de las variaciones que detecta el sensor. La tensión varía en función de la velocidad de rotación y la distancia a la rueda dentada (Gap) tanto en frecuencia como en amplitud. Esas variaciones hacen que la señal que obtengamos sea la siguiente:

Sensores ABS activos. Para ruedas con codificador magnéticas/dentadas.

Los sensores ABS activos reciben este nombre porque precisan un aporte externo de energía para empezar a funcionar.

La respuesta que obtenemos del sensor es una señal cuadrada cuya frecuencia es proporcional a la velocidad de giro de la rueda. La amplitud de la señal no depende de la velocidad y además debido a la tecnología de detección es posible la lectura de la misma desde los 0 km/h.

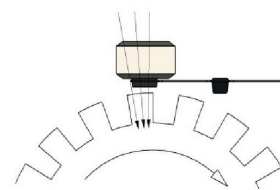

INFORMACIÓN TÉCNICA

ABS Hall

Estos sensores son muy precisos y deben instalarse con mucha exactitud. Se compone de un sensor semiconductor, acoplado a un circuito electrónico que protege el sensor de posibles picos de tensión y un imán permanente.

El principio de funcionamiento se basa en el llamado efecto *Hall*, que consiste en la generación de un voltaje transversal (tensión *Hall*) al sentido de la corriente en un conductor, cuando en él se le aplica perpendicularmente la acción de un campo magnético.

SENTIDO DE GIRO

ABS Hall con anillo codificador magnético

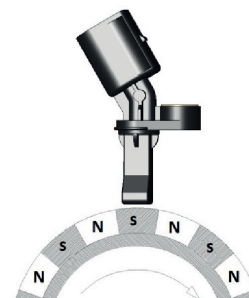

Comparte el principio de la rueda dentada; sin embargo la variación del campo magnético se produce debido al cambio de polaridad de una rueda imantada por secciones (disco codificador). No lleva imán permanente por lo que se consigue reducir el tamaño del sensor. Se puede ahorrar más espacio integrando el anillo magnético dentro del cojinete de la rueda.

SENTIDO DE GIRO

ABS Magnetoresistivo

Los sensores magnetoresistivos son prácticamente insensibles a su posición, lo que permite que se puedan colocar a distancias relativamente grandes del disco codificador y aun así transmitir una señal fiable. Estos sensores permiten detectar una señal muy precisa. El sensor se monta encima del codificador magnético y varía sus propiedades resistivas en función del campo magnético que se le presenta. Debido a la variación de la resistencia interna de este sensor se pueden determinar la velocidad y el sentido de la rotación.

SENTIDO DE GIRO

ASPECTOS VISUALES Y CAUSAS DE FALLO EN LOS SENSORES.

Debe verificarse el cuerpo exterior, el conector y los cables, así como sus pasa-muros, asegurándose de su buen estado.

Compruebe también si el captador muestra alguna grieta, abolladura o golpe que pudiera haberlo dañado. Hay que tener en cuenta que, como norma general, una inspección visual no es suficiente para poder asegurar el buen o mal funcionamiento de la pieza, pero ayuda a hacer un primer diagnóstico.

- 1- Grietas o roturas. Tensiones provocadas por estrés mecánico.
- 2- Deformaciones y abolladuras. Sobrecalentamiento del sensor.
- 3- Sin señal. Rotura del cable por fricción o exceso de vibración, cortocircuitos, roturas internas del sensor por estrés mecánico o térmico.

SÍNTOMAS DE FALLO DE LOS SENSORES.

- Encendido testigo de la luz ABS.
- Bloqueo de ruedas en frenadas normales (sólo en coches con repartidor de frenada electrónico).

MANTENIMIENTO DE LOS SENSORES.

Los sensores de revoluciones de la rueda son los componentes sometidos a las mayores cargas dentro del sistema de regulación del freno.

Evitan que las ruedas patinen y se encargan de proporcionar un comportamiento en carretera estable del automóvil.

Revisar en cada mantenimiento o cada 25.000 km los valores específicos de los sensores.

Reemplazar cuando las comprobaciones de funcionamiento no estén dentro de los valores límite especificados.

INFORMATION TECHNIQUE

FONCTION:

Les capteurs ABS (Antilock Braking System) ou capteurs de vitesse de roue, se trouvent dans la frette des roues et détectent la vitesse de rotation de chacune d'elles, puis transfère cette information à l'unité de contrôle du système ABS. Si l'unité de contrôle du système ABS capte qu'il se produit une baisse importante de vitesse sur une ou plusieurs roues, ce qui pourrait provoquer leur blocage, elle intervient rapidement en modulant la pression de freinage de chaque roue individuellement. Ainsi les roues ne se bloquent pas et garantissent un freinage sûr, ce qui permet au conducteur de conserver le contrôle du véhicule.

Le système ABS n'utilise non seulement l'information que lui envoient ses capteurs mais aussi d'autres systèmes, comme la boîte de vitesses, les systèmes de navigation, GPS, le système TCS, ASR (Systèmes de Contrôle de la Traction), les systèmes de contrôle de châssis, le système ESP (Programme Électronique de Stabilité) ou le contrôle de montée de pentes.

Étant donné le développement constant de ces capteurs, nous pouvons actuellement trouver différentes conceptions en fonction des besoins de précision, taille et résistance.

FAE divise ces capteurs dans 2 grandes groupes:

Capteurs ABS passifs. Pour les roues dentées.

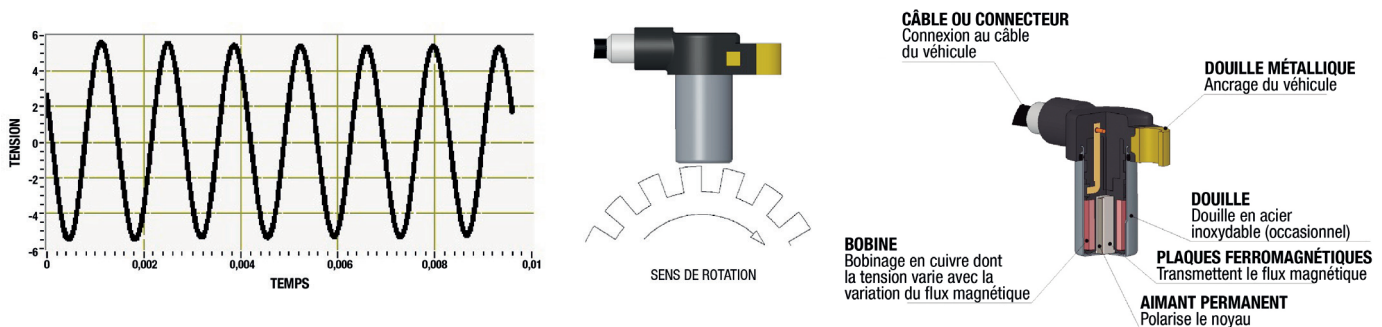

- ABS inductifs.

Capteurs ABS actifs. Pour les roues avec codificateur magnétique/roues dentées.

- ABS Hall.
- ABS Hall avec bague de codeur magnétique.
- ABS Magnétorésistif.

Capteurs ABS passifs. Pour les roues dentées (INDUCTIFS).

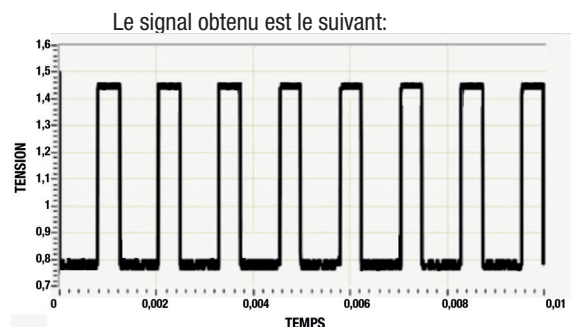

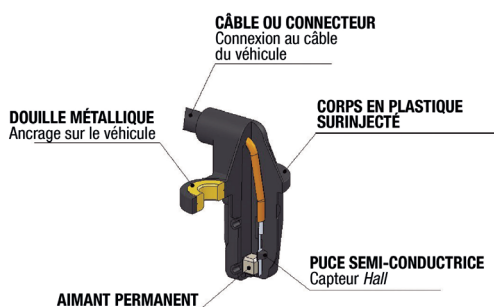

Les capteurs ABS passifs sont habituellement plus grands, et ne commencent à fonctionner que lorsque la roue atteint une vitesse rotationnelle minimale établie. Ils se composent d'une bobine qui entoure un noyau magnétique et un aimant permanent. Le flux magnétique qui se produit entre les dents et les creux de la roue induisent une tension sinusoïdale de sortie qui est proportionnelle à la vitesse des variations que détecte le capteur. La tension varie en fonction de la vitesse de rotation et la distance à la roue dentée (Gap) aussi bien en fréquence qu'en amplitude. Ces variations font que le signal que nous obtenons soit le suivant :

Capteurs ABS actifs. Pour les roues avec codificateur magnétique/roues dentées.

Les capteurs ABS actifs portent ce nom car ils ont besoin d'un apport externe d'énergie pour commencer à fonctionner.

La réponse que nous obtenons du capteur est un signal carré dont la fréquence est proportionnelle à la vitesse de rotation de la roue. L'amplitude du signal ne dépend pas de la vitesse et, en outre, en raison de la technologie de détections, il est possible de le lire depuis 0 km/h.

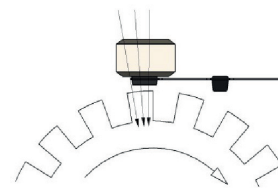

INFORMATION TECHNIQUE

ABS Hall

Ces capteurs sont très précis et doivent être installés avec une grande exactitude. Il se compose d'un capteur semi-conducteur, accouplé à un circuit électronique qui protège le capteur de possibles pics de tension et d'un aimant permanent.

Le principe de fonctionnement se fonde sur le dénommé effet Hall, qui consiste dans la génération d'un voltage transversal (tension Hall) au sens du courant dans un conducteur, quand lui est appliquée perpendiculairement l'action d'un champ magnétique.

SENS DE ROTATION

ABS Hall avec bague de codeur magnétique

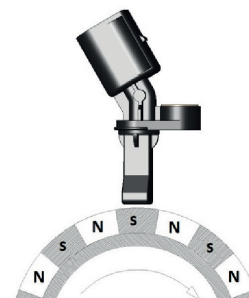

Il partage le principe de la roue dentée; toutefois, la variation du champ magnétique se produit à cause du changement de polarité d'une roue aimantée par sections (disque codeur). Il n'incorpore pas d'aimant permanent, c'est pourquoi la taille du capteur est réduite. Il est possible d'économiser plus d'espace en intégrant la bague magnétique dans le coussinet de la roue.

SENS DE ROTATION

ABS Magnétorésistif

Les capteurs magnétorésistifs sont pratiquement insensibles à leur position, ce qui permet de les placer à des distances relativement grandes du disque codificateur tout en transmettant quand même un signal fiable. Ces capteurs permettent de détecter un signal très précis. Le capteur est monté sur le codificateur magnétique et varie ses propriétés résistives en fonction du champ magnétique qui se présente à lui. Grâce à la variation de la résistance interne de ce capteur, il est possible de déterminer la vitesse et le sens de la rotation.

SENS DE ROTATION

ASPECTS VISUELS ET CAUSES DE DÉFAUT DES CAPTEURS.

Il faut vérifier le corps extérieur, le connecteur et les câbles, ainsi que leurs isolateurs de traversée, en s'assurant de leur bon état.

Il faut aussi vérifier si le capteur montre des fissures, bosselures ou coups pouvant l'avoir endommagé.

Il ne faut pas oublier, comme règle générale, qu'une inspection visuelle n'est pas suffisante pour garantir le bon ou mauvais fonctionnement de la pièce, mais elle aide à établir un premier diagnostic.

1- Fissures ou ruptures. Tensions provoquées par stress mécanique.

2- Déformations et bosselures. Surchauffe du capteur.

3- Sans signal. Rupture du câble par friction ou excès de vibration, courts-circuits, ruptures internes du capteur pour stress mécanique ou thermique.

SYMPTÔMES DE DÉFAUT DES CAPTEURS.

- Activation du témoin lumineux ABS.

- Blocage des roues lors de freinages normaux (uniquement pour des voitures avec distributeur de freinage électronique).

MAINTENANCE DES CAPTEURS.

Les capteurs de vitesse de roue sont les composants soumis aux plus grandes charges dans le système de régulation du frein. Ils évitent que les roues patinent et se chargent de fournir un comportement stable de l'automobile sur la route.

Réviser lors de chaque maintenance ou tous les 25.000 km les valeurs spécifiques des capteurs. Remplacer si les vérifications de fonctionnement se trouvent hors des valeurs limites spécifiées.

The FAE references that are highlighted in green are those whose applications are most respectful to the environment, vehicles that run on compressed natural gas (CNG), liquefied petroleum gas (LPG), ethanol or electricity, as they do not contribute to an increase in pollution.

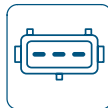

Destacamos con la señal verde todas aquellas referencias FAE que tienen las aplicaciones más respetuosas con el medioambiente, vehículos que funcionan con gas natural comprimido (GNC), gas licuado del petróleo (GLP), etanol o eléctricos, ya que ayudan a no aumentar la contaminación.

Avec le signal vert, nous mettons en avant toutes ces références FAE qui disposent des applications les plus respectueuses de l'environnement, les véhicules fonctionnant au gaz naturel comprimé (GNC), au gaz de pétrole liquéfié (GPL), à l'éthanol ou les véhicules électriques, puisqu'ils évitent l'augmentation de la pollution.

INFORMATION / INFORMACIÓN / INFORMATION

G.B.

This catalog considers vehicles with:

- Left Hand Drive (L.H.D.).
- Manual Gear, 5 speed.
- Without Air Conditioning.
- Without Check Control.
- Without Cruise Control.
- Without ABS.

As the Standard vehicle (generic).

Vehicles with different features (criteria) are treated in a specific way in the information column.

E

En este catálogo se han considerado vehículos con:

- Conducción a la izquierda (L.H.D.).
- Cambio Manual, 5 velocidades.
- Sin Aire Acondicionado.
- Sin Check Control.
- Sin Cruise Control.
- Sin ABS.

Como el vehículo Standard (genérico).

El resto de vehículos con otras características (criterios) se tratan de forma específica en la columna de información.

F

Dans ce catalogue sont considérés les véhicules avec:

- Conduction à gauche (L.H.D.).
- Avec boîte de vitesses manuelle, 5 vitesses.
- Sans Air Conditionné/Climatisation.
- Sans Tableau de Contrôle.
- Sans Vitesse de Croisière.
- Sans Antiblocage (ABS).

Comme le véhicule Standard (générique).

Le reste des véhicules avec d'autres caractéristiques (critères) sont abordés d'une façon spécifique dans la colonne d'information.
