INTRODUCTION / WARRANTY

FAE considers quality as a top priority, which is why we are immersed in a continuous improvement, promoting the use of the most advanced methods for project design and manufacturing of our products, such as Computer Aided Design (CAD), automated controls and processes, to obtain reliability tests, etc., allowing us to overcome successfully our client's quality audits, and even developing jointly new products for their new vehicles. With this catalogue, we intend to help our clients in the rapid identification of our products.
Due to the constant variations made by vehicle manufacturers, we cannot ensure the full accuracy of the information indicated in this **FAE** catalogue, which should be used only as a guide.
Names and references of the manufactures serve only to help you find more quickly our products.

WARRANTY:
FAE guarantees all products against any manufacturing defects. This guarantee is limited to the replacement of faulty parts. **FAE** does not hold itself responsible for the improper use of the product by untrained and non-skilled personnel. Any **FAE** product installed in applications not specified in this catalog will not be subject to warranty.

NOTES:
REFUND POLICY - **FAE** controls 100% the production of all its products, checks and saves all manufacturing information. **FAE** does not refund any article which has been taken out of its heat sealed plastic wrap.
- **FAE** does not accept any return of material, after a period of 15 days from the date of delivery. The return is subject of revision by **FAE**.
- **FAE** will refer to the Court of Barcelona in case of litigation.
- **FAE** reserves the right to modify the characteristics of its products without prior warning.

FAE products have the technology to replace and adapt to the original equivalent and must be installed by skilled specialist, having technical vehicle assembly knowledge and following **FAE** or the original manufacturer's instructions. Installments of **FAE** parts by a non-skilled specialist which lead to a problem in the correct functioning of the part and/or the vehicle, will not be **FAE**'s responsibility.

INTRODUCCIÓN / GARANTÍA

FAE considera la calidad como un objetivo prioritario, y por ello, estamos inmersos en una mejora continua, promoviendo la aplicación de los medios más innovadores para el proyecto y fabricación de nuestros productos, como son el Diseño Asistido por Ordenador (CAD), la automatización de controles y procesos para obtener ensayos de fiabilidad, etc., que nos permiten superar con éxito las auditorías de calidad de nuestros clientes, llegando a desarrollar conjuntamente productos para sus nuevos vehículos. Con este catálogo, pretendemos ayudar a nuestros clientes en la rápida identificación de los productos de nuestra fabricación. Debido a las constantes variaciones de los fabricantes de vehículos, no podemos garantizar la completa exactitud de la información que se indica en este catálogo de **FAE**, sirviendo únicamente como guía. Los nombres y referencias de los fabricantes sirven únicamente para ayudar a encontrar más rápidamente nuestros productos.

GARANTÍA:
FAE garantiza todos los productos contra fallos de fabricación. La garantía se limita al cambio del producto defectuoso, **FAE** no cubre la mala aplicación o manipulación del mismo por personal no especializado. Cualquier producto **FAE** instalado en aplicaciones no especificadas en este catálogo no estará sujeto a garantía.

NOTAS:
DEVOLUCIÓN- **FAE** controla al 100% la producción de todos sus productos, comprueba y guarda la información del comportamiento de cada uno de ellos en el momento de su fabricación. Si cualquier producto ha sido extraído de su envoltorio de plástico, que va termo-sellado, no se podrá aceptar su devolución.
- **FAE** no aceptará ninguna devolución de material transcurridos 15 días de la fecha de suministro. Condicionado a la revisión del material devuelto.
- **FAE** ante cualquier tipo de litigio se remite a los Tribunales de Barcelona.
- **FAE** se reserva el derecho a modificar las características de sus productos sin previo aviso.

Los productos **FAE** tienen la tecnología para reemplazar y adaptarse a los equivalentes de origen y deben ser montados por personal especializado y con conocimientos en el montaje de componentes del vehículo, siguiendo las instrucciones de montaje de la pieza **FAE** y/o del origen. Cualquier montaje realizado por personal no especializado que represente un problema en el funcionamiento de la pieza y/o del vehículo no será responsabilidad de **FAE**.

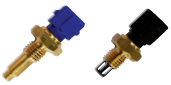

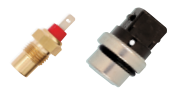

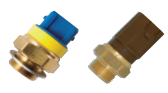

INTRODUCTION / GARANTIE

FAE conçoit la qualité comme un objectif prioritaire, pour cela, nous nous engageons à améliorer constamment notre manière de faire, en utilisant au possible les moyens les plus modernes dans le développement et la fabrication de nos produits, tels que la conception assistée par ordinateur (CAD), l'automatisation des contrôles et des processus pour obtenir des tests de fiabilité, etc. Cela nous permet de passer avec succès les contrôles qualité de nos clients et de développer même avec eux des nouveaux produits pour leurs tous derniers véhicules. Nous avons faits en sorte que ce catalogue aide nos clients à identifier rapidement les produits de notre fabrication.
Etant données les fréquentes modifications des fabricants de véhicules, nous ne pouvons pas garantir la complète exactitude des informations apportées par ce catalogue **FAE** qui doit seulement être considéré comme un guide. Ainsi les noms et références des fabricants sont mentionnés dans l'unique but de faciliter la recherche de nos produits.

GARANTIE :
FAE garantie ses produits contre tout défaut de fabrication. La garantie est limitée au remplacement de la pièce défectueuse et ne couvre pas sa mauvaise installation ou encore la fausse manipulation de celle-ci par personnel non formé. Tout produit **FAE** installé dans des applications non spécifiées dans ce catalogue ne sera pas couvert par la garantie.

REMARQUES :
REMBOURSEMENT- **FAE** contrôle à 100% la production de tous ses produits. Nous vérifions et gardons toutes les informations concernant leur comportement lors de la fabrication. Dès lors que n'importe quel produit a été extrait de son emballage plastique étanche, nous ne procédons à aucun remboursement.
- **FAE** décline tout retour du matériel, après 15 jours à compter de la date de livraison. Le retour sera soumis à une révision par **FAE**.
- **FAE** s'en remettra aux Tribunaux de Barcelone en cas de litige.
- **FAE** se réserve le droit de modifier les caractéristiques de ses produits sans aucun avis préalable.

Les produits **FAE** ont la technologie pour remplacer et s'adapter à leurs équivalents d'origine. Ils doivent être assemblés par personnel qualifié et compétent dans l'ensemble des composants du véhicule, suivant les instructions de montage de la pièce **FAE** et/ou de l'origine. Tout assemblage par personnel non qualifié qui représente un problème dans le fonctionnement de la pièce et/ou du véhicule ne sera pas de la responsabilité de **FAE**.

TECHNICAL INFORMATION

TYPES OF OXYGEN SENSORS

FAE produces three types of Oxygen Sensors for combustion control: titanium-based binary Oxygen Sensors, zirconia-based binary Oxygen Sensors and Wide Banda Oxygen Sensors. These different types of Oxygen Sensors are not replaceable each other, because they work differently.

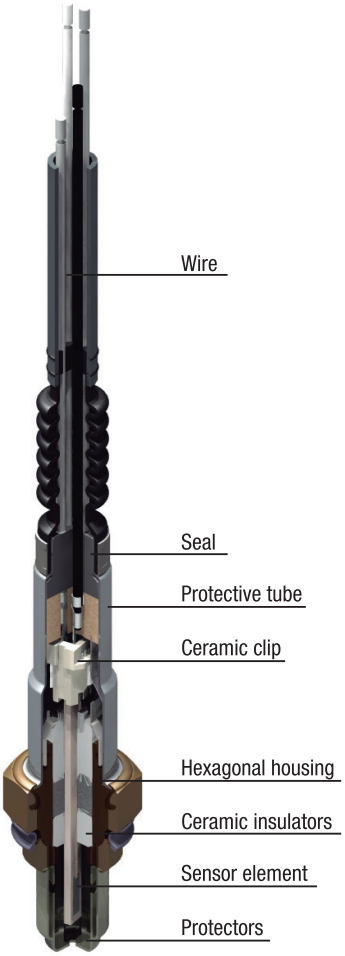

FAE Oxygen Sensors are based on the most modern Planar Multilayer Ceramic technology, which distinguishes them from the conventional 'thimble' ones. Thanks to the **FAE**'s Planar Multilayer Ceramic technology, it has been possible to integrate both the Oxygen Sensor and the heater in a unique solid piece, reducing its size in comparison to the conventional Oxygen Sensors. These improvements allow **FAE** Oxygen Sensors to reduce the heating power and the necessary time to reach the operating temperature (700 ºC; 1,292 ºF).

Constraining exhaust gas emission regulations, together with new strategies on engine management (such as lean mixture or direct injection engines) have shown some limitations of the conventional Oxygen Sensors. In order to reach the lowest exhaust gas emission limitations; ultra-fast operating Oxygen Sensors are needed to avoid the pollution when starting the engine. These improvements have been reached with the Planar Multilayer Ceramic technology application used by **FAE** for the manufacturing of its Planar Oxygen Sensors.

The ignition time or "Light-off" is the time needed by the Oxygen Sensor to warm up and being able to inform the ECU (Electronic Control Unit) about the exhaust gas composition.

Using a good condition Oxygen Sensor will ensure:
- Lower emissions.
- Improving engine efficiency and performance.
- Lower fuel consumption (a malfunctioning Oxygen Sensor can increase the consumption by 15 %).
- Not damaging the catalytic converter.

Check the correct Oxygen Sensor performance at least every 30,000 km (20,000 miles).

OXYGEN SENSOR FUNCTION

Nowadays, exhaust gas control is a main concern. As public awareness increases, more restrictive regulations on automotive exhaust gas control have been implemented in Europe and in America *(figure 1)*.

The automotive sector has been changing its strategies to reduce emissions and fulfil regulations. The technology has improved the engines efficiency and favored the installation of elements for lowering the exhaust emissions.

The 3-way catalytic converter is the most extensively used and it has been assembled in every petrol vehicles since 1992 in Spain. Its most relevant characteristics are the possibility of oxidizing CO and non-burnt hydrocarbons, as well as reducing NOx. The major efficiency of this catalytic converter for these mixed reactions is a concrete fuel-air ratio corresponding to a Lambda (combustion parameter) equal to 1.

Through the Oxygen Sensor signal, the control unit recognizes the mixture composition. The Oxygen Sensor controls the mixture of the fuel-air ratio and ensures that the engine works at the optimum mixture, Lambda 1. In rich mixtures or ones with fuel excess, Lambda <1, the fuel injection decreases, whereas with oxygen excess or lean mixtures, Lambda >1, the injected fuel quantity is increased till the optimum.

All vehicles with catalytic converter have at least one Oxygen Sensor; the regulation Oxygen Sensor whose function has been already described. This Oxygen Sensor is placed before the catalytic converter. Nevertheless, vehicles applying the OBD-II (on-board diagnostic), the second version of the diagnosis standard, equip a second Oxygen Sensor, a diagnosis sensor, located in the near part of the catalytic converter. Its function is to report the smooth operation of the regulation sensor and the catalytic converter, and to warn when these elements shall be replaced.

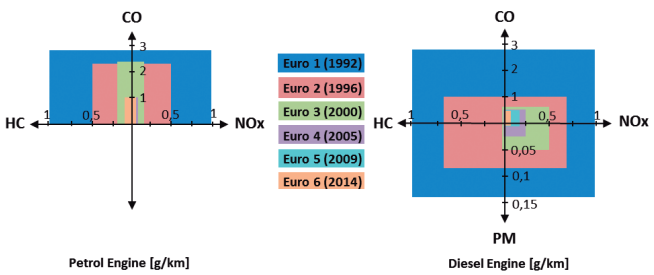

Figure 1. Emission regulations.

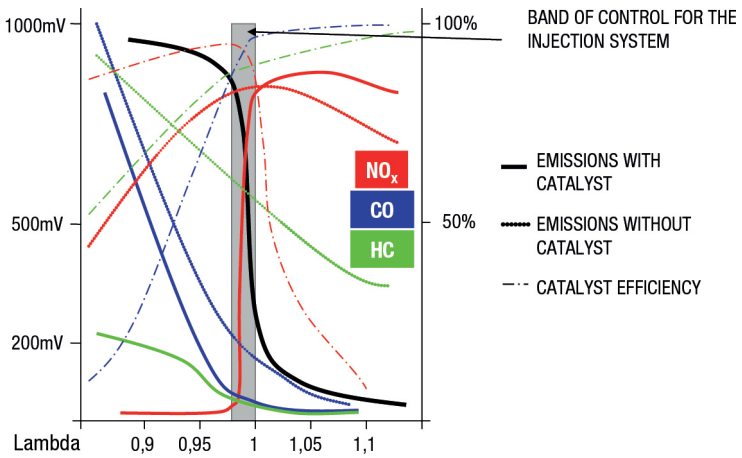

Figure 2. Engine control.

TECHNICAL INFORMATION

TYPES OF OXYGEN SENSORS

There are different types of Oxygen Sensors. They can be classified attending to their sensing material and their working principle: Zirconia binary Oxygen Sensors (Zr), Titania binary Oxygen Sensors (Ti) and Wide Band Oxygen Sensors. The Table 1 summarizes the characteristics of each kind of Oxygen Sensor.

Technology	Titania binary	Zirconia binary		Wide Band	
Sensing material	Titanium dioxide (TiO_2)	Zirconium dioxide (ZrO_2)		Zirconium dioxide (ZrO_2)	
Working principle	Resistive	Electrochemical		Electrochemical	
Output signal	Voltage	Voltage		Current	
Size	Standard	Standard	Mini	Standard	Mini
Air reference	No	Yes	Yes / No	Yes / No	Yes
Number of wires	3-4	1-2 / 3-4	1-4	5	4 **AFR**
Heating element	Yes	No / Yes	Yes	Yes / Yes	Yes

Table 1

- How does the binary Oxygen Sensor with the ZIRCONIA ceramic body work?

Binary Oxygen Sensors made of Zirconium Dioxide *(figures 3, 4)* contain a solid electrolyte generating an electric voltage. This output voltage is provided due to a comparison between two atmospheres (exhaust gas in one side and air reference in the other side) and is sensitive to the oxygen concentration in exhaust gases. Rich mixtures lead to a high voltage and low mixtures cause a low voltage, thus giving a kind of on-off response or 0-1. This is easy to detect by the ECU. The sensing material is electrically activated above 350 ºC (662 ºF). Different evolutions can be distinguished among the binary Zirconia Oxygen Sensors:

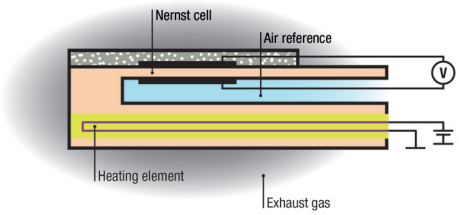

Figure 3. Sectional view of the sensor and mode of operation.

Unheated Oxygen Sensors: These were the first ones to fit vehicles. They reach the working temperature > 350 ºC (> 662 ºF) when they are exposed to exhaust gases at high temperatures. For this reason, they are located close to the engine. The ignition time or Light-off is higher than 2 minutes. They can use one or two wires. Depending on the application, the sensor housing may be ground-insulated. The lifetime is about 50,000 to 80,000 km (30,000 to 50,000 miles).

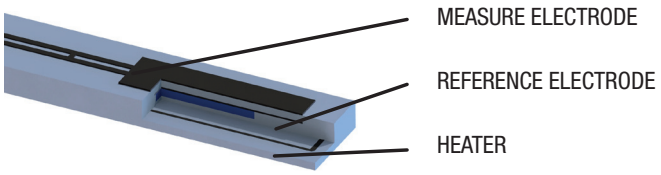

Figure 5. Zirconium dioxide binary Oxygen Sensor.

Heated Oxygen Sensors *(figure 5)*: They carry an integrated heating element, reducing its size and reaching the working temperature in approximately 10 seconds.
They manage to reduce emissions on the most critical phase; the engine cold-start.
They can work with three or four wires (two wires for the heater, plus one or two wires for the output response *(figure 6)*, with the housing occasionally ground-insulated). Their lifetime is about 160,000 km (100,000 miles).

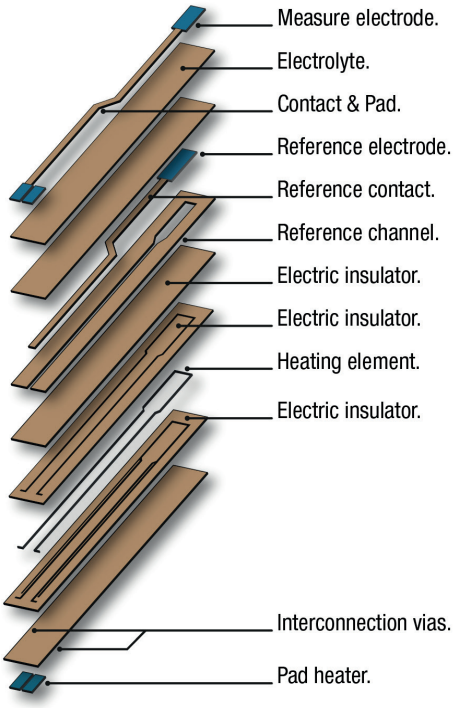

Figure 4. Schematic aspect of the sensing element.

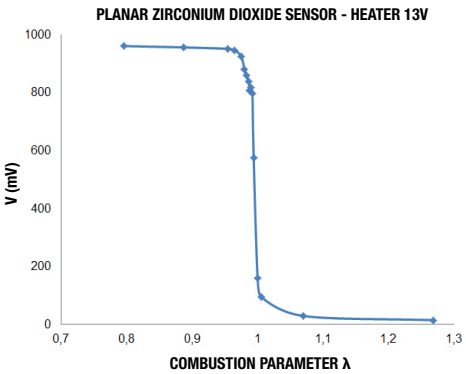

Figure 6. Electrical response function of the parameter Lambda.

TECHNICAL INFORMATION

TYPES OF OXYGEN SENSORS

Apart from standard size Oxygen Sensors, there are also low sized, heated binary Oxygen Sensor ("Mini Sensors"). Mini Oxygen Sensors include the same electrochemical cell structure than conventional size Oxygen Sensors. Therefore, their output response is also an open circuit voltage. The main advantages of these sensors are the lower heating power consumption and lower size. This makes them feasible for applications in motorbikes.

Mini Oxygen Sensors do not include an air duct reference. Thus, they need an external electric current *(figure 7)* to compensate the lack of the atmospheric reference. The external current is supplied by the vehicle's electronic control unit. Regarding characteristics such as sensitivity, response times, resistance to poisoning elements, etc., Mini Oxygen Sensors show the same behavior than standard size Oxygen Sensors.

- How does the Oxygen Sensor with the TITANIA ceramic body work?

This Oxygen Sensor is basically made up of a Titanium Dioxide ceramic body *(figure 7)*. Unlike the Oxygen Sensors made of Zirconium Dioxide *(figure 8)*, its working principle is not electrochemical but resistive. For this reason, the whole sensing material is immersed in the exhaust gas. There is no need of exposure to an air reference for providing a comparison-based signal *(figure 9)*. Titania Oxygen Sensors always include a heater.

At high temperatures, resistance of this material is sensitive in front of variations of oxygen concentration. The resistance is minimal for rich mixtures and high for lean mixtures. The sensor is fed with a constant voltage and its output response is read by the ECU by means of a voltage divider.

- How do the WIDE BAND Oxygen Sensors work?

Unlike Zirconia-based Oxygen Sensors, Wide Band Oxygen Sensors *(figure 10)* provide a continuous response *(figure 11)*, not binary, in front of the detected Lambda value. Therefore, they measure the exhaust gas composition with good precision. This makes them valid for diesel and gasoline combustion engines.

Wide Band Sensors contain two electrochemical cells working concurrently. Of the cells measures the rich or lean character of the exhaust gas mixture, in a similar way as binary Oxygen Sensors work. The other one reacts and is conditioned by the signal of the first cell and the oxygen concentration in the exhaust gas. The whole operation of both cells provides an electric current which is positive for lean mixtures, negative for rich mixtures and null for the case of the stoichiometric mixture.

In opposition to binary Oxygen Sensors, the pumped current of each Wide Band Oxygen Sensor is different. Besides, it is necessary to scale or calibrate this current.
There are three different strategies to calibrate the current of these devices:

- Wide Band Sensors with a calibration resistor in the connector. In terms of the total pumped current of each sensor, a resistance is included between two of the output terminals. This resistance is adjusted for each Sensor and its value modulates the net current read by the ECU. When assembling and connecting the sensor in the vehicle, an electric circuit containing two parallel resistors is closed. One of them is the calibration resistor from the sensor, whereas the other one is always the same. The calibration resistor value ranges between 30 and 300 Ω.

- Wide Band Sensors with an identification resistor. In this case, resistances cannot take any continuous value, only some discrete values according to 23 different allowed ranges of pumped current. When assembling and connecting the sensor to the vehicle, this resistance which is included in the connector does not close any circuit neither modulates the pumped current, so it is just used as a label to be read by the ECU. When identifying the resistor value, the ECU knows which scale to be taken to detect the sensor pumped currents. The identification resistor value can take several possible orders of magnitude, ranging from hundreds of ohms to tens of kΩ.

- Wide Band Sensors with no resistor. During the first seconds of operation, the ECU is able to calibrate the current by means of electronic procedures.

Whatever the current calibration strategy is (calibration resistances or identification resistances), the function of the resistor is making possible the detection of the pumped current. Therefore, in general, two sensors of the same reference do not necessarily include the same resistance.

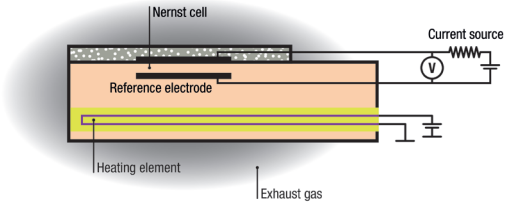

Figure 7. Sectional view of the sensor and mode of operation.

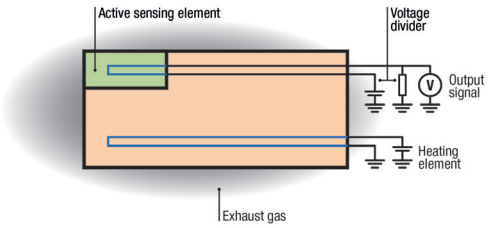

Figure 8. Sectional view of the sensor and mode of operation.

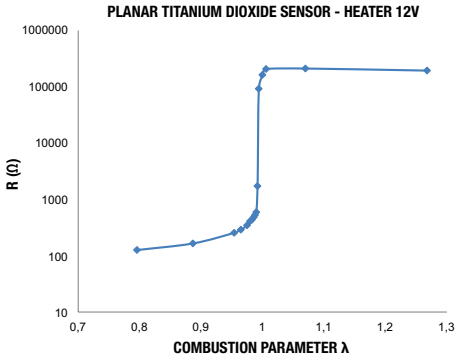

Figure 9. Electrical response function of the parameter Lambda.

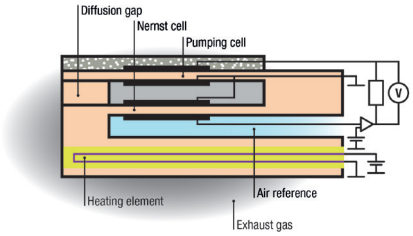

Figure 10. Sectional view of the sensor and mode of operation.

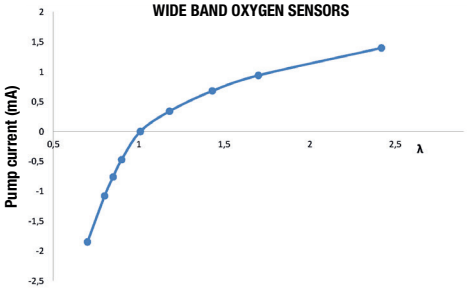

Figure 11. Electrical response function of the parameter Lambda.

TECHNICAL INFORMATION

TYPES OF WIDE BAND OXYGEN SENSORS

Apart from the resistance in the connector of the sensors, it is also possible to classify them according to the existence or not of air reference duct:

- First generation Wide Band Sensors, containing an embedded air reference duct, similar to the one in the binary Zirconium-based Oxygen Sensors.

- Second generation Wide Band Sensors, which do not need that reference duct for working. In comparison to the first generation, the lack of inner duct leads to savings in power consumption. Also, the light off time is lower and signal stability through the sensor life time is larger.

Depending on each vehicle application, a first or second generation Wide Band Oxygen Sensor is needed. It is not possible to replace first and second generation sensors between them. Their lifetime is about 160,000 km (100,000 miles).

LAMBDA AIR FUEL RATIO A/F SENSORS

These are 4-wire Wide Band sensors, which provide a proportional signal *(figure 11)* against the detected lambda value, but with a single electrochemical cell. This cell is regulated by the vehicle electronics and reacts conditioned by the amount of oxygen present in the combustion gas simultaneously.
The combined operation provides a characteristic current corresponding to the different gas compositions in the exhaust pipe without the need for prior individual calibration.

The current it generates is positive for poor mixtures and is able to measure gas composition with an extremely high level of accuracy. It is also sensitive to rich mixtures that don't contain oxygen.The sensor's ability to generate current in the opposite direction makes it suitable for both diesel and petrol engines.

The sensor is equivalent to a 5-wire broadband sensor in terms of response offered, because the signal it gives is proportional to the lambda sensor, it also gives a more efficient control of emissions. However, unlike the 5-wire, this sensor requires a single electronic cell, which means less platinum usage is required.

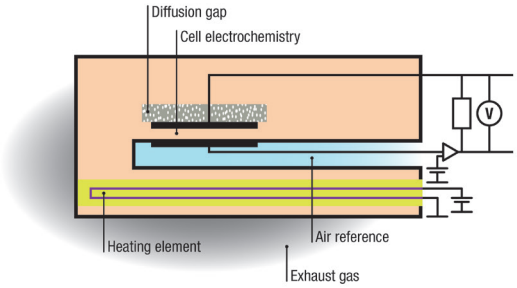

Figure 11. Sectional view of the sensor and mode of operation.

At **FAE** we design and manufacture our own materials.

We created new materials in the production of this sensor, which we replicate batch on batch without any variation in features or characteristics.

Our sensor features a robust and reliable design, which undergoes a process of highly rigorous tests including: thermal shock with drastic temperature changes, overheating fatigue with continuous switching on and off, life testing under extreme operating conditions, functional current and signal test, electrical insulation test, signal stability test, etc.

We verify thermal resistance with and without the presence of water condensation and also carry out life testing on the different parts of the sensor, in order to replicate its functioning inside a car.

Additionally, we carry out water tightness tests and contamination tests for both chemical agents and saline environments.

Once the sensor is fixed to a complete probe, we carry out life testing on an engine bank, where probes are left running over the course of thousands of hours, and we also carry out tests of thousands of kilometres on real vehicles.

Laboratory tests are carried out for a duration of more than 2,000 hours. The mileage in real applications reaches a distance of more than 200,000 km in different vehicles to ensure the sensor's compatibility with different applications and ensure a 100% reliable and highly resistant product that is suitable to go to market.

Recommendations:
*Before installing the Lambda Sensor, make sure you are using the correct reference for your vehicle.
*Do not install the Lambda Sensor if it has been damaged or impacted.
* It is recommended that after a major collision, the Lambda Sensors be checked or replaced.

TECHNICAL INFORMATION

THE INSTALLATION OF NEW OXYGEN SENSORS

FAE Oxygen Sensors are installed quick and easy. Remember that the engine must be cold, if not you must take the necessary precautions since the Oxygen Sensor reaches very high temperatures and you might run the risk of burns. The installation requires to soak the thread with a special grease. This grease will facilitate the disassembly and will prevent the Oxygen Sensor from remaining welded to the exhaust pipe due to the extreme working conditions. **FAE** Oxygen Sensors are delivered with a greased thread. Nevertheless it would be convenient to double check.

The Oxygen Sensor tightening is another important aspect. Apply below indicated torque and be aware that tightening too strongly can deform the thread:
- Oxygen Sensors with a M18 thread, tighten to 35-45 Nm (25-33 ft lb).
- Oxygen Sensors with a M12 thread, tighten to 18-23 Nm (13-7 ft lb).

Follow these steps to install the **FAE** Universal Oxygen Sensor:

It is recommended that after a major collision, check the Oxygen Sensors or replace them.
To install the **FAE** Universal Oxygen Sensor, you must follow the next steps:
1- Disconnect the battery. Disconnect the old Oxygen Sensor lead wire connector. Remove the old Oxygen Sensor from the vehicle.
2- Cut the lead wire(s) approximately 15cm (6 inches) on the old Oxygen Sensor separating the connector from the rest of the sensor.
3- Strip the insulation (according to the indicated length) from the old lead wire(s) with the attached connector, making sure that no damage is done to the inner wire.
4- Insert the stripped wire leads into the caps of the new **FAE** Oxygen Sensor. Be aware of matching the colours of the wires.
5- Crush the caps. Heat the heat shrink tube until it forms a tight, fixed seal between the old connector and the new Oxygen Sensor.
6- Once the process described above is complete, you are ready to install the new **FAE** Oxygen Sensor.

Follow these steps to install a Specific Oxygen Sensor:

- Before installing the Oxygen Sensor, make sure to use the appropriate reference for your vehicle.
- Don't install the Oxygen Sensor if it has been hit or seems to be damaged.
- Disconnect the battery.
- Remove the old Oxygen Sensor from the vehicle.
- Place the Oxygen Sensor in its location and check it the wires are not twisted, doubled or trapped.
  Oxygen Sensors with a M18 thread, tighten to 35-45 Nm (25-33 ft lb).
  Oxygen Sensors with a M12 thread, tighten to 18-23 Nm (13-7 ft lb).
- Install the new Oxygen Sensor lead wire(s) exactly as they were originally installed in the old replaced Oxygen Sensor, taking special care in keeping the wires away from the exhaust manifold (or from any other hot element), or from any moving parts.

How are the Oxygen Sensors tested?

To verify the proper working of the Oxygen Sensor, without removing it from the vehicle, use an oscilloscope. To obtain a proper reading the basic engine set up according to the manufacturer's specification has to be full filled and ensure that the engine is thoroughly warmed. Connect the Oxygen Sensor output to the oscilloscope, without disconnecting the Oxygen Sensor from the vehicle's ECU. Once the connections are made, keep the engine running at 2,000 rpm. Under these conditions, if the Oxygen Sensor is working properly, the signal from the oscilloscope will fluctuate rapidly and constantly between 0.2 volts (lean mixture) and 0.8 volts (rich mixture).

Another important fact to keep in mind is the time needed for the voltage to change. It should be about 300 milliseconds. The time to switch from a lean to a rich mixture and from a rich to a lean mixture should be the same or very close.
By the signal generated the Oxygen Sensor is constant and the reaction time to change the mixture is too slow, the Oxygen Sensor has to be replaced.
It is recommended to test the performance of the Oxygen Sensor each maintenance and always before an emissions test. A malfunctioning Oxygen Sensor has an adverse effect on your fuel economy. When replaced as required, a new Oxygen Sensor will contribute to lower vehicle operating costs and the investment in replacing it will be rapidly paid back.

INFORMACIÓN TÉCNICA

SONDAS LAMBDA DE FAE

FAE fabrica tres tipos de Sondas Lambda para el control de la combustión: Sondas Lambda binarias de titanio, Sondas Lambda binarias de circona y Sondas de Banda Ancha. Estos tres tipos de Sondas Lambda no son intercambiables entre sí pues trabajan de forma distinta.

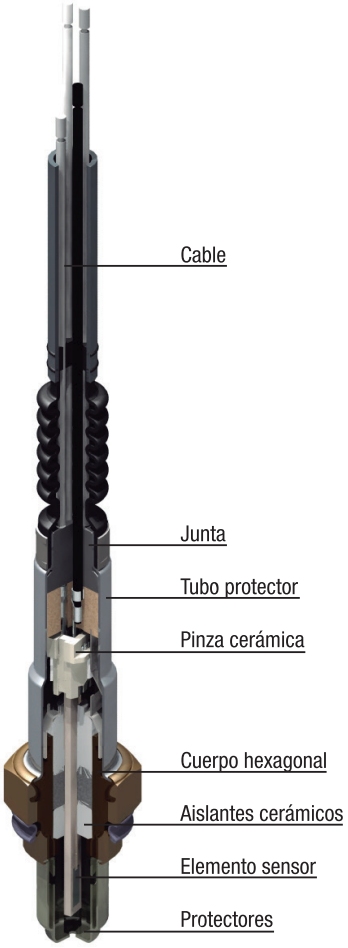

Las Sondas Lambda de **FAE** se basan en la más moderna tecnología Cerámica Multicapa Planar, que las distingue de las Sondas Lambda convencionales de tipo "dedal" o *thimble*. Gracias a la tecnología Cerámica Multicapa Planar de **FAE**, se han conseguido integrar en un único sólido tanto el elemento sensor como su calefactor y reducir su tamaño respecto a las Sondas Lambda convencionales. Estas mejoras nos permiten reducir la potencia de calefacción y el tiempo necesario para alcanzar la temperatura operativa (700 ºC).

Debido a la aplicación de legislaciones cada vez más restrictivas de las emisiones, como nuevas estrategias de gestión del motor, motores de mezcla pobre, de inyección directa, etc., se han evidenciado algunas de las limitaciones de las Sondas Lambda convencionales. Para alcanzar límites de emisiones más reducidos se necesitan Sondas Lambda inicialmente de respuesta "ultra rápida", y así evitar la contaminación en el instante de arranque del motor. Estas mejoras se han conseguido con la tecnología Cerámica Multicapa Planar que **FAE** aplica para la fabricación de sus Sondas Lambda Planares.

El tiempo de encendido o *Light-off* es el tiempo que la Sonda Lambda tarda en alcanzar la temperatura de funcionamiento necesaria para poder informar a la ECU de la composición de los gases de escape.

Con el uso de una Sonda Lambda en perfectas condiciones, nos aseguraremos de tener:
- Menos contaminación.
- Mejor funcionamiento y rendimiento del motor.
- Un consumo de combustible menor (las Sondas Lambda en mal estado pueden causar hasta un 15 % de incremento del consumo).
- No dañar el catalizador.

*Revise el correcto funcionamiento de la Sonda Lambda al menos cada 30.000 km.

FUNCIÓN DE LA SONDA LAMBDA

Hoy en día las emisiones contaminantes son problema de primer orden y, de estas emisiones, las que provienen de los automóviles son una parte muy importante.

Una sociedad cada vez más sensibilizada con la contaminación ha sido el motivo para la aparición de legislaciones, tanto europeas como americanas y de otros países, cada vez más restrictivas en esta materia *(figura 1)*.

El sector del automóvil ha ido evolucionando sus estrategias para reducir la contaminación de los vehículos y cumplir con la legislación, a la vez que la tecnología ha ido mejorando la eficiencia de los motores y la instalación de elementos que paulatinamente han ido reduciendo las emisiones contaminantes.

El catalizador de tres vías es el catalizador de uso más extendido y se monta en todos los vehículos de gasolina desde 1992 en Europa. La característica más relevante de este catalizador es la posibilidad de oxidar el monóxido de carbono (CO), los hidrocarburos no combustionados y de reducir los óxidos de nitrógeno (NOx) simultáneamente. Existe una relación óptima entre la cantidad de aire y de combustible para la cual se alcanza la máxima eficacia del catalizador. Esta relación óptima - catalizador (la "mezcla estequiométrica") se caracteriza por un valor de Lambda igual a 1.

Mediante la señal de la Sonda Lambda, la unidad de control reconoce la composición de la mezcla. La Sonda Lambda controla el ratio de la mezcla de combustible-aire y asegura que el motor trabaja en la mezcla óptima, Lambda igual a 1. En mezclas con exceso de combustible o ricas, Lambda <1, se reduce la inyección de combustible, mientras que mezclas con defecto o pobres, Lambda >1, la cantidad de combustible inyectada se aumenta hasta alcanzar el óptimo.

Todos los vehículos con catalizador llevan al menos una Sonda Lambda, la Sonda Lambda de regulación, situada antes del catalizador. Sin embargo, los vehículos que aplican el OBD-II *(on-board diagnostic)*, la segunda versión del estándar de diagnóstico, equipan una segunda Sonda Lambda, Sonda Lambda de diagnóstico, ubicada en la parte posterior del catalizador. Su función es informar del correcto funcionamiento de la Sonda Lambda de regulación, corrigiendo cualquier desviación, avisando en el momento en que este se encuentra agotado y ha de ser sustituido.

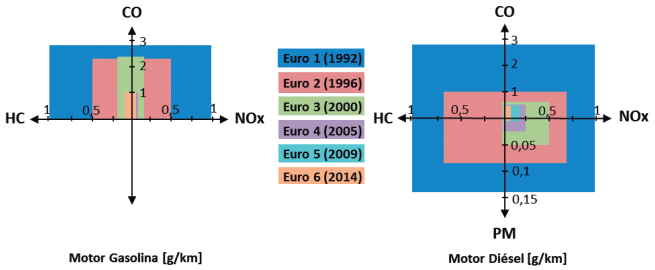

Figura 1. Legislación en emisiones.

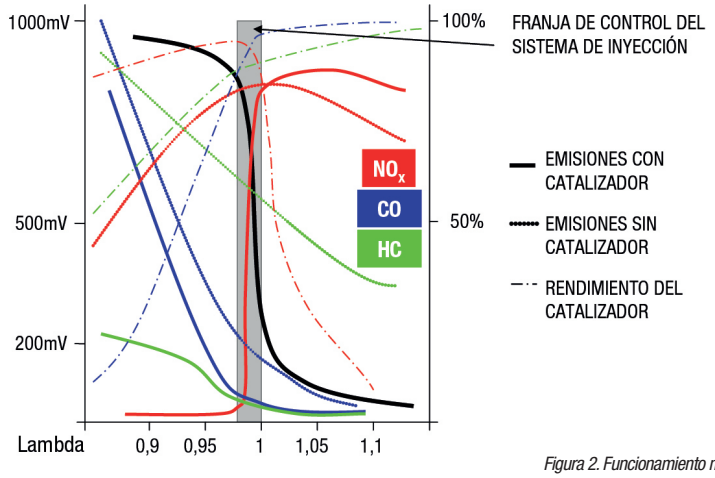

Figura 2. Funcionamiento motor.

INFORMACIÓN TÉCNICA

TIPOS DE SONDAS LAMBDA

Las sondas Lambda se pueden clasificar en función de su material sensible y su principio de funcionamiento: Sondas Lambda binarias de circona (Zr), Sondas Lambda de titanio (Ti) y Sondas de Banda Ancha. La Tabla 1 resume las características de cada tipo de Sonda Lambda.

Tecnología	Binaria Titanio	Binaria Circona				Banda Ancha			
Material sensor	Dióxido de Titanio (TiO_2)	Dióxido de Circonio (ZrO_2)				Dióxido de Circonio (ZrO_2)			
Funcionamiento	Resistivo	Electroquímico				Electroquímico			
Señal salida	Tensión	Tensión				Corriente			
Tamaño	Estándar	Estándar		Mini		Estándar		Mini	
Ref. aire exterior	No	Sí		Sí	No	Sí	No	Sí	
Nº cables	3-4	1-2	3-4	1-4		5		4 **AFR**	
Calefactor	Sí	No	Sí	Sí		Sí	Sí	Sí	

Tabla 1

- Cómo funcionan las Sondas Lambda binarias de CIRCONA:

Las Sondas Lambda binarias de circona están basadas en Dióxido de Circonio *(figura 3, 4)* y contienen un electrolito sólido que proporciona una tensión eléctrica. Esta tensión eléctrica se obtiene por comparación de dos atmósferas (los gases de escape por un lado y el aire exterior por el otro) y es sensible a la concentración de oxígeno en los gases de escape. Las mezclas ricas en combustible producen una tensión alta y las mezclas pobres producen una tensión baja, una respuesta *on-off* o 0-1 fácil de interpretar por la electrónica. El material sensor se activa siempre que se encuentre a una temperatura superior a 350 °C. Entre las Sondas Lambda binarias de circona, podemos distinguir diferentes evoluciones:

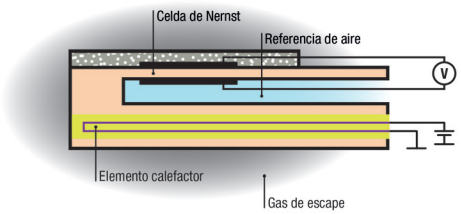

Figura 3. Vista en sección del sensor y modo de funcionamiento.

Sonda Lambda sin calefactor: Estas Sondas Lambda fueron las primeras en equiparse en los vehículos. Alcanzan la temperatura de trabajo (>350 ºC) gracias al calor de los gases de escape. Por este motivo, van ubicadas junto al motor. El tiempo de encendido o *Light-off* es superior a 2 minutos. Pueden ser de uno o dos cables, con la carcasa aislada o no de masa en función de la aplicación. El intervalo de cambio está entorno a los 50.000-80.000 km.

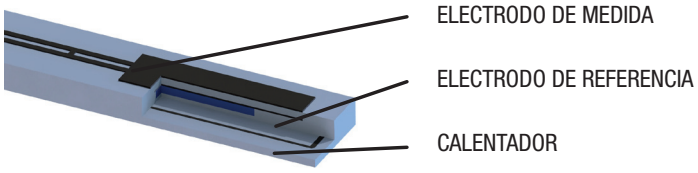

Figura 5. Aspecto esquemático del elemento sensor.

Sondas Lambda con calefactor *(figura 5)*: Estas Sondas Lambda ya incorporan un elemento calefactor que las permite alcanzar la temperatura de trabajo con independencia de los gases de escape. Pueden ser de tres o cuatro cables (dos cables para el calefactor, más uno o dos cables para la tensión de salida *(figura 6)*, con la carcasa aislada o no de masa en función de la aplicación). El intervalo de cambio es de 100.000-160.000 km. Las Sondas Lambda de **FAE** poseen el elemento calefactor integrado en el componente sensor, reduciendo su tamaño y consiguiendo alcanzar las temperaturas de trabajo en unos 10 segundos. Consiguen reducir a la mitad las emisiones de la fase crítica de arranque en frío. El intervalo de cambio es cada 160.000 km.

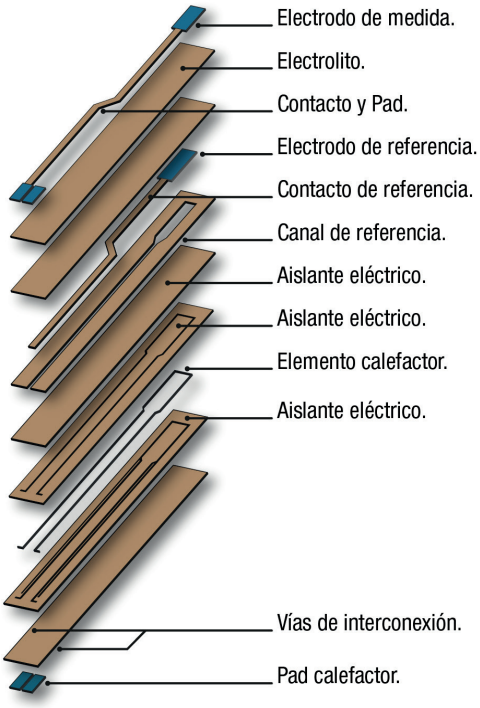

Figura 4. Aspecto esquemático del elemento sensor.

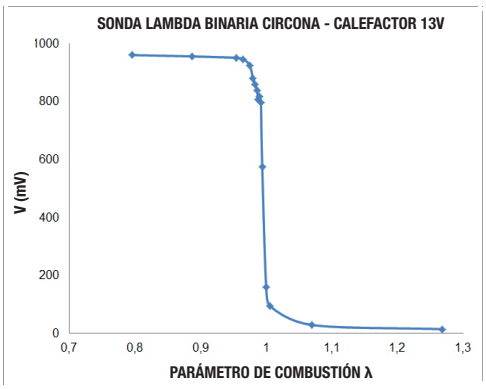

Figura 6. Respuesta eléctrica en función del parámetro Lambda.

INFORMACIÓN TÉCNICA

TIPOS DE SONDAS LAMBDA

Además de las Sondas Lambda de tamaño estándar, también existen Sondas Lambda binarias con calefactor de pequeño tamaño ("Sondas Mini"). Las Sondas Lambda Mini tienen la misma estructura de celda electroquímica que las Sondas Lambda de tamaño convencional, y por lo tanto también proporcionan como salida una tensión en circuito abierto. Las principales ventajas de estas Sondas radican en el menor consumo de potencia de calefactor y su menor volumen, lo que las hace idóneas para aplicaciones en motocicletas. Para facilitar su calentamiento y debido a su menor tamaño, las Sondas Lambda Mini no incorporan una referencia de aire exterior, por lo que deben suplir esta referencia atmosférica con una corriente externa superpuesta a su señal eléctrica *(figura 7)*. Esta corriente externa es suministrada por la unidad de control electrónico del vehículo. Las Sondas Lambda Mini tienen las mismas características de sensibilidad, tiempos de respuesta, resistencia a agentes contaminantes, etcétera, que las Sondas Lambda de tamaño estándar.

- Cómo funciona la Sonda Lambda binaria de TITANIO:

Esta Sonda Lambda está constituida, básicamente, por un elemento cerámico de Dióxido de Titanio *(figura 7)*. A diferencia de las Sondas Lambda binarias basadas en Dióxido de Circonio *(figura 8)*, su principio de funcionamiento no es electroquímico sino resistivo. Por este motivo, el material sensor se encuentra sumergido en los gases de escape, sin necesitar la presencia de aire exterior para proporcionar una señal por comparación *(figura 9)*. Las Sondas Lambda de titanio siempre incluyen un calefactor. Cuando tiene alta temperatura, la resistencia de este material es sensible a la variación de la concentración de oxígeno en los gases de escape. Para una mezcla rica, la resistencia baja a valores mínimos y para una mezcla pobre, sube a valores máximos. La ECU alimenta la Sonda Lambda con una tensión fija y lee la respuesta de la Sonda Lambda a través de un circuito divisor de tensión.

- Cómo funciona la Sonda Lambda de BANDA ANCHA:

A diferencia de las Sondas Lambda de circona, las Sondas Lambda de Banda Ancha (figura 10) proporcionan una respuesta continua *(figura 11)*, y no binaria, frente al valor de lambda detectado. Por este motivo, miden con gran exactitud la composición de los gases de escape, lo que las hace aptas también para motores diesel y de gasolina.

Las Sondas Lambda de Banda Ancha contienen dos celdas electroquímicas que trabajan de manera simultánea. Una de ellas mide el carácter rico o pobre de la mezcla de gases, de forma similar a las Sondas Lambda binarias. La otra celda electroquímica reacciona condicionada por la señal de la primera celda y por la cantidad de oxígeno en el gas de combustión. El funcionamiento conjunto de ambas celdas proporciona una corriente eléctrica positiva para mezclas pobres, negativa para mezclas ricas y nula para el caso de mezcla estequiométrica.

La corriente generada por cada Sonda Lambda de Banda Ancha es diferente a la corriente de las sondas lambda binarias. En consecuencia, es necesario escalar o calibrar esta corriente. Existen tres estrategias para calibrar la corriente de estos dispositivos:

- Sonda de Banda Ancha con resistencia de calibración en el conector: En función del valor de corriente total bombeada por la Sonda, se incorpora una resistencia entre dos de sus terminales de salida. Esta resistencia está ajustada para cada Sonda y su valor regula la corriente realmente leída por la ECU. Al conectar la Sonda al vehículo, se cierra un circuito eléctrico que incluye dos resistencias en paralelo, siendo una de ellas fija y la otra resistencia es incorporada por la Sonda. El valor de la resistencia de calibración suele estar comprendido entre 30 y 300 Ω.

- Sonda de Banda Ancha con resistencia de identificación: En este caso las resistencias no pueden tomar cualquier valor de manera continua, sino que están de manera discreta de acuerdo con los 23 rangos distintos de corrientes bombeadas permitidas. Al conectar la Sonda al vehículo, esa resistencia incluida en la Sonda no cierra ningún circuito, ni regula la corriente del elemento sensor, sino que simplemente es leída por la ECU. Al identificar el valor de la resistencia, la ECU reconoce la escala a la que debe trabajar para leer correctamente las corrientes bombeadas por la Sonda. El valor de resistencia de identificación puede tomar diversas órdenes de magnitud, desde cientos de ohms hasta decenas de kΩ.

-Sonda de Banda Ancha sin resistencia. Durante los primeros segundos de operación, la ECU es capaz de calibrar la corriente bombeada mediante procedimientos electrónicos.

Tanto en el caso de resistencias de calibración como en el de resistencias de identificación, la función de este componente es posibilitar la lectura de la corriente bombeada, por lo que, en general, dos Sondas de una misma referencia no tienen por qué incluir la misma resistencia.

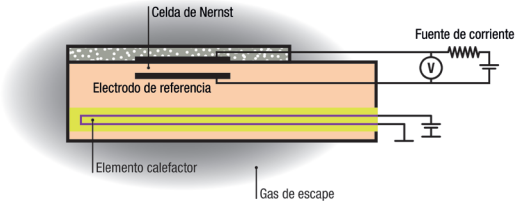

Figura 7. Vista en sección del sensor y modo de funcionamiento.

Figura 10. Vista en sección del sensor y modo de funcionamiento.

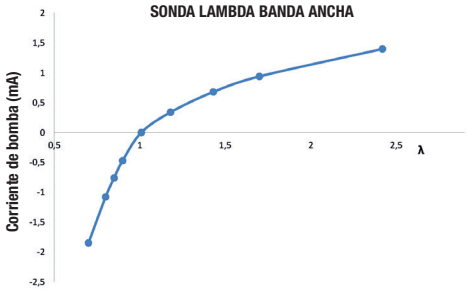

Figura 11. Respuesta eléctrica en función del parámetro Lambda.

INFORMACIÓN TÉCNICA

TIPOS DE SONDAS LAMBDA DE BANDA ANCHA

Además de la resistencia incluida en el conector de las Sondas Lambda, podemos clasificarlas también atendiendo a la presencia o no de canal de referencia:

- La Sonda de Banda Ancha de primera generación contiene un canal de referencia de aire exterior similar al de la Sonda Lambda binaria de circona. Todas las Sondas de primera generación incorporan una resistencia de calibración en el conector.

- La Sonda de Banda Ancha de segunda generación no necesita de ese canal de referencia para funcionar. En comparación con las de primera generación, la ausencia de canal permite un ahorro de la potencia consumida por estas sondas, el tiempo de calentamiento inicial es menor y la estabilidad de la señal a lo largo de su vida útil es mayor. Las Sondas de segunda generación pueden incluir resistencias de calibración o de identificación en el conector, o también no incorporar ninguna.

En función de la aplicación de cada vehículo es necesaria una Sonda de Banda Ancha de primera o de segunda generación, con o sin resistencia en el conector, sin que puedan ser intercambiables entre sí. El intervalo de cambio es cada 160.000 km.

SONDAS LAMBDA AIR FUEL RATIO A/F

Son sondas de Banda Ancha de 4 cables, que generan una señal proporcional *(figura 11)* frente al valor lambda detectado, pero con una única celda electroquímica. Esta celda es regulada por la electrónica del vehículo y reacciona condicionada por la cantidad de oxígeno presente en el gas de combustión de manera simultánea. El funcionamiento en conjunto proporciona una corriente característica que corresponde a las diferentes composiciones de gas en el tubo de escape. La corriente que genera es positiva para mezclas pobres, esta corriente es capaz de medir con gran exactitud la composición del gas y, a su vez, es sensible a mezclas ricas, sin oxígeno. Al ser capaz de generar corriente en el sentido contrario; esto las hace aptas para motores diésel y también para motores de gasolina.

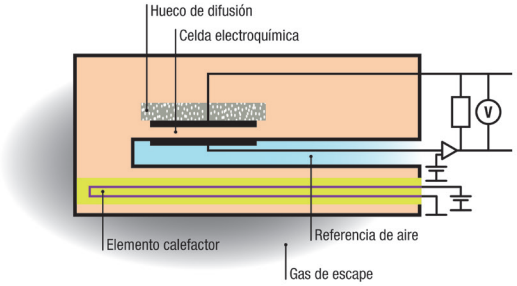

Figura 11. Vista en sección del sensor y modo de funcionamiento.

Este sensor es equivalente a un sensor de Banda Ancha de 5 cables en lo que se refiere a respuesta, porque la señal que da es proporcional a la sonda lambda, además da un control más eficiente de las emisiones, sin embargo, a diferencia de las de 5 cables, este sensor requiere de una sola celda electrónica, lo que implica menos uso de platino.

En **FAE** diseñamos y fabricamos nuestros propios materiales.

Para este nuevo sensor hemos creado nuevos materiales que se replican lote tras lote sin variar ninguna característica.

Nuestro sensor tiene un diseño robusto y fiable, el cual es sometido a unas pruebas muy exigentes como: choque térmico con cambios drásticos de temperatura, fatiga del calefactor con continuos encendidos y apagados, test de vida con condiciones de funcionamiento extremas, ensayo funcional de corriente y señal, ensayo de aislamiento eléctrico, ensayo de estabilidad de la señal, etc.

Verificamos la resistencia térmica con y sin condensación de agua, también hacemos ensayos de vida de los diferentes componentes del sensor, replicando el funcionamiento en un automóvil.
Por otro lado, hacemos ensayos de estanqueidad, ensayos de contaminación ya sea por algún agente químico o como por estar en un ambiente salino, etc.

Una vez que el sensor está montado en una sonda completa, llevamos a cabo el test de vida en un banco motor, donde las sondas están funcionando durante miles de horas, y también realizamos el test en vehículos reales que van acumulando miles de kilómetros.

Los test de laboratorio se realizan por más de 2.000 horas. El kilometraje en aplicaciones reales ronda los más de 200.000 Km en diferentes vehículos para asegurar la compatibilidad del sensor con las aplicaciones y así ofrecer al mercado un producto 100% fiable y de gran resistencia.

INFORMACIÓN TÉCNICA

MONTAJE DE LAS NUEVAS SONDAS LAMBDA

La instalación de las Sondas Lambda **FAE** es muy sencilla y rápida. Recuerde que, para realizar esta operación, debe esperar a que el motor este completamente frío o bien tome precauciones, ya que las Sondas Lambda alcanzan elevadas temperaturas y corre el riesgo de sufrir quemaduras. La instalación requiere el impregnado de la rosca con grasa especial, esta grasa facilitará el desmontaje e impedirá que la Sonda Lambda quede soldada al tubo de escape debido a las condiciones extremas de trabajo.

*Las Sondas Lambda **FAE** ya incorporan esta grasa que está distribuida alrededor de la rosca lista para su montaje, no obstante, es conveniente asegurarse.

El apriete de la Sonda Lambda es otro aspecto importante, hágalo siguiendo las siguientes directrices (excederse en el apriete puede deformar la rosca):

- Sonda Lambda M18: Monte la Sonda Lambda manualmente hasta el final, para apretar después con la llave adecuada. Apretar 1/2 - 3/4 de vuelta (35-45 Nm).
- Sonda Lambda M12: Monte la Sonda Lambda manualmente hasta el final, para apretar después con la llave adecuada. Apretar 1/2 - 1 de vuelta (18-23 Nm).

Recomendaciones:
*Antes de instalar la Sonda Lambda, asegúrese de que está utilizando la referencia correcta para su vehículo.
*No instale la Sonda Lambda si se ha golpeado.
* Es recomendable que después de una colisión importante revisen las Sondas Lambda o las sustituyan.

¿Cómo se instala una Sonda Lambda Universal?

Para instalar la Sonda Lambda Universal **FAE** debe seguir los siguientes pasos:
1- Desconecte la batería. Desconecte el conector de la Sonda Lambda que quiere sustituir (la que esta situada en el vehículo).
2- Desmonte la Sonda Lambda del vehículo. Asegurándose de dejar suficiente cable para realizar el empalme, posteriormente corte los cables de la Sonda Lambda retirada, separando así el conector del resto de la Sonda Lambda.
3- Quite el aislante, según la longitud indicada y procurando no dañar el núcleo metálico del cable.
4- Introduzca los cables pelados del conector, dentro de los casquillos que monta la nueva Sonda Lambda **FAE**, prestando atención en respetar los colores de los cables.
5- Aplaste los casquillos. Aplique calor sobre la funda termo-retráctil que lleva el casquillo, para conseguir que la unión realizada entre el conector recuperado y la sonda nueva quede correctamente fijada y estancada.
6- Una vez terminado el proceso anterior, usted ya puede instalar la Sonda Lambda **FAE** en su vehículo.

¿Cómo se instala una Sonda Lambda Específica?

1- Desconecte la batería.
2- Retire la Sonda Lambda antigua.
3- Sitúe en primer lugar la Sonda Lambda en su emplazamiento, asegurándose de que el cable no queda torcido, doblado o atrapado.
4- Apriete la Sonda Lambda siguiendo las siguientes directrices:
   Sonda M18: Monte la Sonda Lambda manualmente, hasta el final, para apretar después, con la llave adecuada. Apretar 1/2-3/4 de vuelta (35-45 Nm).
   Sonda M12: Monte la Sonda Lambda manualmente, hasta el final, para apretar después, con la llave adecuada. Apretar 1/2-1 de vuelta (18-23 Nm).
5- Conecte y aloje el cable, tal y como estaba instalado originalmente, teniendo especial cuidado en asegurarse de que el cable no quede situado sobre el colector de escape u otro componente caliente del motor.

¿Cómo se prueban las Sondas Lambda?

Para verificar el correcto funcionamiento de una Sonda Lambda, sin desmontarla de nuestro vehículo, necesitamos disponer de un osciloscopio.
Teniendo en cuenta que el motor debe encontrarse ajustado dentro de las indicaciones del fabricante, se procede al calentamiento del motor.
Conecte, mediante el sistema de conexión adecuado y específico, la salida del sensor a la entrada del osciloscopio, siempre sin desconectar la Sonda Lambda de la ECU del coche. Una vez realizadas estas conexiones, mantenga el motor a unas 2.000 rpm. En estas condiciones, si la Sonda Lambda funciona correctamente, la señal que nos mostrará el osciloscopio, variará rápida y constantemente entre 0,2 voltios (mezcla pobre) y 0,8 voltios (mezcla rica).

Otro dato muy importante y que es necesario tener en cuenta es el tiempo empleado en variar de una tensión a otra, que debe ser de unos 300 milisegundos.
El tiempo transcurrido en pasar de mezcla pobre a rica y en pasar de mezcla rica a pobre debe ser el mismo o muy similar.
Si la señal generada por el sensor es constante o el tiempo de reacción al cambio de riqueza en la mezcla, es demasiado lento, debe sustituirse la Sonda Lambda.
Es aconsejable revisar el funcionamiento de la Sonda Lambda cada vez que se realice un reglaje del motor y siempre antes de las pruebas de emisiones.
Recordemos que un funcionamiento lento de la Sonda Lambda, afecta directamente al consumo de nuestro vehículo, por lo que, el coste producido por la sustitución de la Sonda Lambda, se verá rápidamente amortizado.

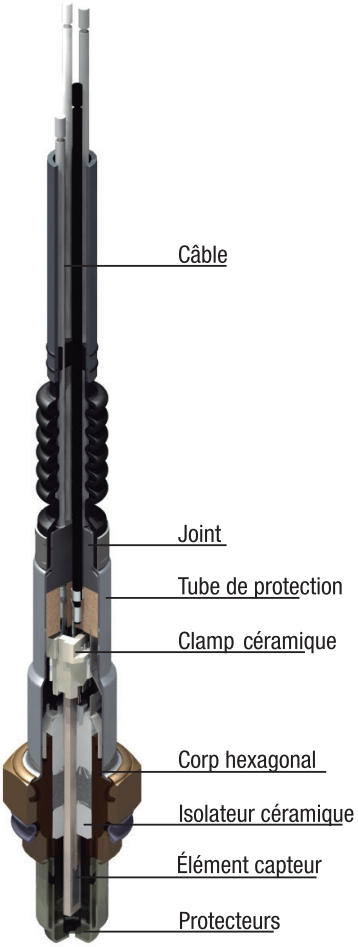

INFORMATION TECHNIQUE

SONDES LAMBDA FAE

FAE fabrique trois types de Sondes Lambda pour contrôler la combustion : Sondes Lambda binaires au Titane, sondes Lambda binaires au Zirconium et Sondes à Large Bande. Ces trois types de Sondes Lambda ne sont pas interchangeables entre elles puisqu'elles travaillent différemment.

Les Sondes Lambda de **FAE** se fondent sur la technologie la plus moderne, Céramique Multicouche Planaire, qui les distingue des Sondes Lambda conventionnelles de type « dé à coudre » ou *thimble*. Grâce à la technologie Céramique Multicouche Planaire, **FAE** a réussi à intégrer dans une seule et solide pièce l'élément capteur et son radiateur; tout en réduisant sa taille par rapport à celle des Sondes Lambda conventionnelles. Ces améliorations nous permettent de réduire la puissance de caléfaction et le temps nécessaire pour atteindre la température opérationnelle (700 ºC).

La mise en place de législations toujours plus sévères en matière d'émissions et les nouvelles stratégies de gestion du moteur, moteurs à mélange pauvre, à injection directe, etc; ont mis en évidence les limites des Sondes Lambda conventionnelles. Afin de réduire au maximum les émissions il est nécessaire d'avoir recours aux Sondes Lambda à réponse « ultra rapide » dans le but d'éviter la pollution lors du démarrage du moteur. **FAE** a obtenu ces améliorations grâce à l'application de la technologie Céramique Multicouche Planaire dans la fabrication de ses Sondes Lambda Planaires.

Le temps d'allumage ou *Light-off* : est le temps que la Sonde Lambda nécessite pour atteindre la température afin d'informer l'ECU de la composition des gaz d'échappement.

L'utilisation d'une Sonde Lambda en parfait état assure :
- Une réduction de la pollution.
- Un meilleur fonctionnement et rendement du moteur.
- Une consommation réduite de carburant (les Sondes Lambda en mauvais état peuvent augmenter jusqu'à 15 % de la consommation).
- De ne pas abîmer le catalyseur.

Veuillez réviser le fonctionnement correct de la sonde tous les 30.000 km.

FONCTION DE LA SONDE LAMBDA

Aujourd'hui le contrôle des émissions polluantes, et notamment de celles rejetées par les automobiles, est un problème de premier ordre. Une société de plus en plus sensibilisés à la pollution a favorisé l'apparition de législations de plus en plus restrictives, en Europe comme en Amérique et d'autres *(figure 1)*.

Le secteur de l'automobile a évolué ses stratégies pour réduire la pollution des véhicules et respecter la législation, alors que la technologie a amélioré l'efficacité des moteurs et l'installation d'éléments réduisant progressivement les émissions polluantes.

Le catalyseur à trois voies est celui dont l'usage est le plus répandu, et est installé sur tous les véhicules essence depuis 1992 En Europe. La principale caractéristique de ce catalyseur est la possibilité de réaliser l'oxydation du monoxyde de carbone (CO) et des hydrocarbures non brûlés et de réduire, simultanément, les oxydes d'azote (NOx). Il existe un rapport entre la quantité d'air et celle de carburant qui permet d'obtenir l'efficacité maximale du catalyseur. Ce rapport optimal - catalyseur (le « mélange stoechiométrique ») se caractérise par une valeur de Lambda égale à 1.

À travers le signal de la Sonde Lambda, l'unité de contrôle reconnaît la composition du mélange.
La Sonde Lambda contrôle le ratio du mélange essence-air et s'assurer que le moteur fonctionne dans le mélange optimal, Lambda 1. Dans les mélanges riches ou avec un excès de carburant, Lambda <1, l'injection de celui-ci se réduit, alors que dans les mélanges pauvres ou à faible, Lambda> 1, la quantité de carburant injectée augmente jusqu'à obtenir un niveau optimal.

Tous les véhicules avec catalyseur ont au moins une Sonde Lambda, la Sonde Lambda de régulation est située avant le catalyseur. Cependant, les véhicules qui appliquent l'OBD-II *(on-board diagnostic)*, la deuxième version du standard de diagnostic, sont équipés d'une deuxième Sonde Lambda, la Sonde de diagnostic, placée dans la partie postérieure du catalyseur. Sa fonction est d'informer le bon fonctionnement de la Sonde de régulation, en corrigeant toute déviation, et alertant du moment de substitution.

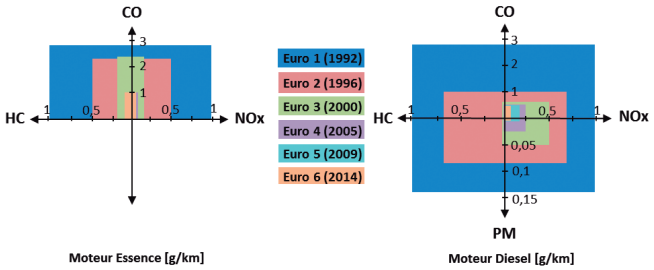

Figure 1. Législation sur les émissions.

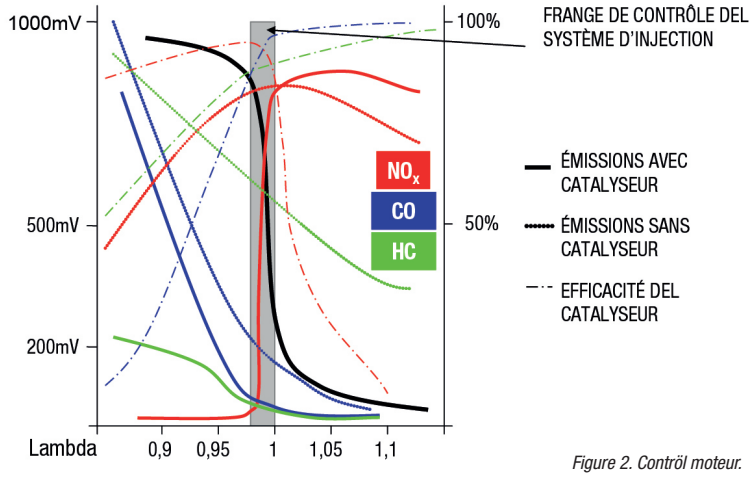

Figure 2. Contröl moteur.

INFORMATION TECHNIQUE

TYPES DE SONDE LAMBDA

Il existe différents types de Sondes Lambda, que nous pouvons classer en fonction de leur matériel sensible et de leur principe de fonctionnement : Sondes Lambda binaires au zirconium (Zr), Sondes Lambda au titane (Ti) et Sondes à Large Bande. Le Tableau 1 résume les caractéristiques de chaque type de Sonde Lambda.

Technologie	Binaire au Titane	Binaire au Zirconium				Large Bande			
Matériel capteur	Dioxyde de Titane (TiO_2)	Dioxyde de Zirconium (ZrO_2)				Dioxyde de Zirconium (ZrO_2)			
Principie fonctionnement	Résistif	Électrochimique				Électrochimique			
Signal de sortie	Tension	Tension				Courant			
Taille	Standard	Standard		Mini		Standard		Mini	
Référence d'air	No	Oui		Oui	No	Oui	No	Oui	
Nombre de câbles	3-4	1-2	3-4	1-4		5		4 **AFR**	
Réchauffeur	Oui	No	Oui	Oui		Oui	Oui	Oui	

Tableau 1

- Fonctionnement des Sondas Lambda binaires avec l'élément senseur de ZIRCONIUM :

Les Sondes Lambda binaires de zirconium sont basées de dioxyde de zirconium *(figure 3, 4)* et contient un électrolyte solide qui fournit une tension électrique. Cette tension est obtenue par comparaison de deux atmosphères, (les gaz d'échappement d'un côté et l'air extérieur de l'autre), et est sensible à la concentration en oxygène dans les gaz d'échappement. Les mélanges de carburant riches produisent une haute tension et les mélanges pauvres une faible tension. Une réponse on-off ou 0-1 facile à interpréter électronique. Le capteur s'active chaque fois dès que la température dépasse à 350 °C.
Entre les Sndes Lambda zirconium binaires, on peut distinguer différentes évolutions:

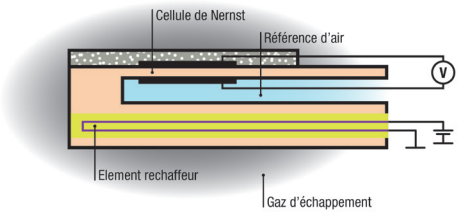

Figure 3. Vue en section du capteur et mode de fonctionnement.

Les Sondes Lambda non chauffées : Ces Sondes Lambda ont été les premières à être montés dans les véhicules. Elles atteignent leur température de travail (> 350 ºC) grâce à la chaleur des gaz d'échappement. Pour cette raison elles sont placées près du moteur. Le temps d'allumage ou *Light-off* est supérieur à 2 minutes. Peuvent être un ou deux câbles avec le boîtier isolé ou de la masse en fonction de l'application. La durée de vie est d'environ 50.000 à 80.000 Km.

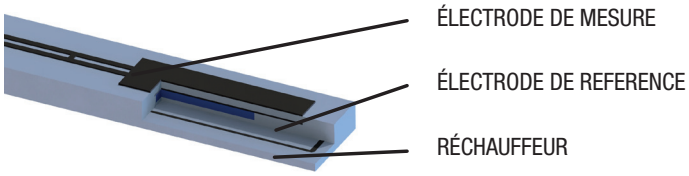

Figure 5. Aspect schématique de l'élément capteur.

Les Sondes Lambda chauffées *(figure 5)* : Ces Sondes Lambda incorporent déjà un élément radiateur qui leur permet d'atteindre la température de travail indépendamment de celle des gaz d'échappement. Elles peuvent être de trois ou quatre câbles (deux câbles pour le radiateur, et un ou deux câble pour la tension de sortie, avec le boîtier isolé ou la masse en fonction de l'application).La durée de vie est 100.000-160.000 km. Les Sondes Lambda de **FAE** possèdent l'élément radiateur intégré dans le composant senseur, tout en ayant une taille réduite, elles atteignent la températures de travail en 10 secondes. Elles réussissent à réduire de moitié les émissions de la phase critique de démarrage à froid *(figure 6)*. La durée de vie est d'environ 160.000km.

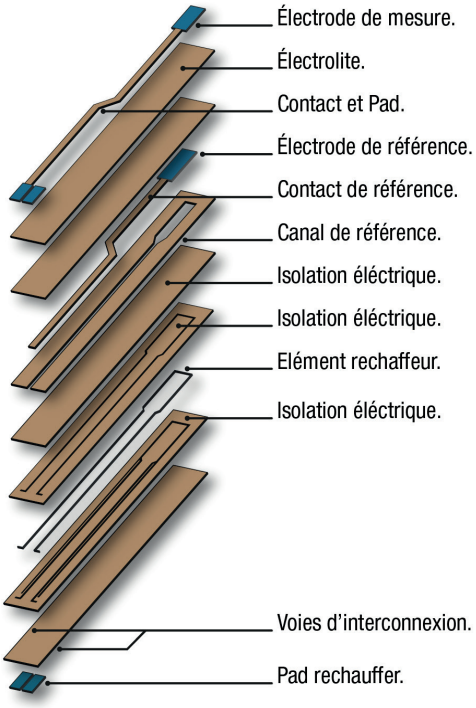

Figure 4. Aspect schématique de l'élément capteur.

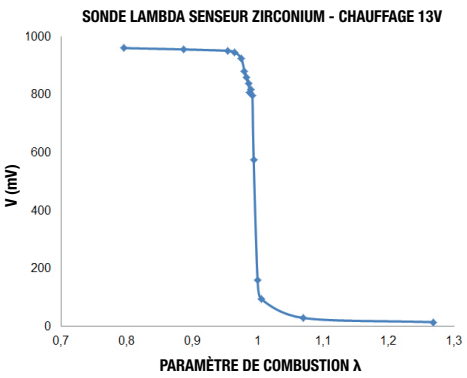

Figure 6. Réponse électrique en fonction du paramètre Lambda.

INFORMATION TECHNIQUE

TYPES DE SONDE LAMBDA

En plus des Sondes Lambda de taille standard, il existe également des Sondes Lambda binaires à réchauffeur de petites dimensions (« Sondes Mini »). Les Sondes Lambda Mini présentent la même structure de cellule électrochimique que les Sondes Lambda de taille conventionnelle et, par conséquent, elles fournissent aussi comme sortie une tension en circuit ouvert. Les principaux avantages de ces Sondes Lambda résident dans une moindre consommation de puissance de réchauffeur et un moindre volume, ce qui les rend idéales pour des applications sur des motocyclettes. Pour faciliter leur réchauffement et en raison de leur moindre taille, les Sondes Lambda Mini n'incorporent pas de référence d'air extérieur, elles doivent donc suppléer cette référence atmosphérique moyennant un courant externe superposé à son signal électrique *(figure 7)*. Ce courant externe est fourni par l'unité de contrôle électronique du véhicule. Les Sondes Lambda Mini ont les mêmes caractéristiques de sensibilité, temps de réponse, résistance aux agents contaminants, etc., que les Sondes Lambda de taille standard.

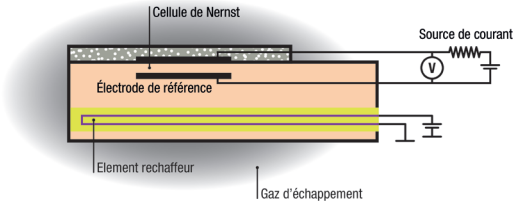

Figure 7. Vue en section du capteur et mode de fonctionnement.

-Fonctionnement des Sondes Lambda binaires avec élément senseur de TITANE :

Cette Sonde Lambda est constituée, élémentairement, par un élément céramique en Dioxyde de Titane. À la différence des Sondes Lambda binaires conçues en Dioxyde de Zirconium *(figure 8)*, son principe de fonctionnement n'est pas électrochimique mais résistif. C'est pourquoi le matériel capteur est submergé dans les gaz d'échappement, sans avoir besoin de la présence d'air extérieur pour fournir un signal par comparaison *(figure 9)*.

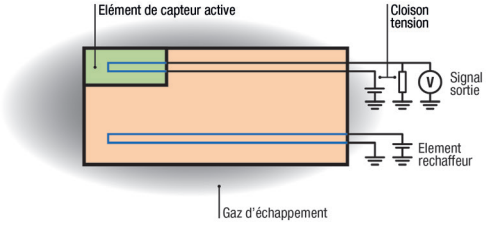

Figure 8. Vue en section du capteur et mode de fonctionnement.

Les sondes Lambda titane comprennent toujours un radiateur. A haute température, la résistance de ce matériel est sensible à la variation de la concentration en oxygène dans les gaz d'échappement. Pour un mélange riche, la résistance baisse à des valeurs minimales et pour un mélange faible, elle atteint les valeurs maximales. L'ECU alimente la Sonde Lambda avec une tension fixe et lit la réponse de la Sonde Lambda à l'aide d'un circuit séparateur de tension.

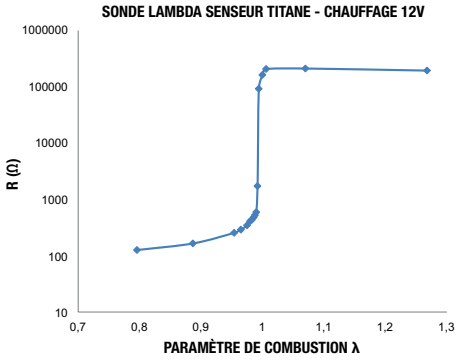

Figure 9. Réponse électrique en fonction du paramètre Lambda.

- Comment fonctionnent les Sondes Lambda à LARGE BANDE :

À la différence des Sondes Lambda au zirconium, les Sondes Lambda à Large Bande *(figure 10)* fournissent une réponse continue *(figure 11)*, et non pas binaire, face à la valeur de lambda détectée. C'est pourquoi elles mesurent avec une grande exactitude la composition des gaz d'échappement, ce qui les rend aptes également pour des moteurs diésel et essence.

Les Sondes Lambda à Large Bande contiennent deux cellules électrochimiques qui travaillent de manière simultanée. L'une d'elles mesure le caractère riche ou pauvre du mélange de gaz, similairement aux Sondes Lambda binaires. L'autre cellule électrochimique réagit, conditionnée par le signal de la première cellule et de la quantité d'oxygène dans le gaz de combustion. Le fonctionnement conjoint des deux cellules fournit un courant électrique positif pour des mélanges pauvres, négatif pour des mélanges riches et nul dans le cas d'un mélange stoechiométrique.

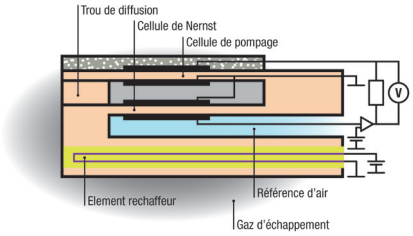

Figure 10. Vue en section du capteur et mode de fonctionnement.

À la différence de ce qui se produit avec les Sondes Lambda binaires, le courant généré par chaque Sonde Lambda à Large Bande est différent. Par conséquent, il faut échelonner ou calibrer ce courant. Il existe trois stratégies pour calibrer le courant de ces dispositifs :

- Sondes à Large Bande à résistance de calibrage dans le connecteur. En fonction de la valeur de courant total pompé par la Sonde, une résistance est incorporée entre deux de ses terminaux de sortie. Cette résistance est ajustée pour chaque Sonde et sa valeur module le courant réellement lu par l'ECU. En connectant la Sonde au véhicule se ferme un circuit électrique qui inclut deux résistances en parallèle, une étant fixe et l'autre étant celle incorporée par la Sonde. La valeur de la résistance de calibrage est généralement comprise entre 30 et 300 Ω.

- Sondes à Large Bande à résistance d'identification. Contrairement aux Sondes à résistance de calibrage, dans ce cas les résistances ne peuvent pas prendre n'importe quelle valeur de manière continue, elles sont discrétisées conformément à 23 plages différentes permises de courants pompés. En connectant la Sonde au véhicule, cette résistance incluse dans la Sonde ne ferme aucun circuit ni module le courant de l'élément capteur, simplement elles est lue par l'ECU. En identifiant la valeur de la résistance, l'ECU connaît l'échelle à laquelle il doit travailler pour lire correctement les courants pompés par la Sonde. La valeur de résistance d'identification peut prendre des ordres de grandeur très divers, de centaines d'ohms à des dizaines de kΩ.

- Sondes à Large Bande sans résistance. Pendant les premières secondes d'opération, l'ECU est capable de calibrer le courant pompé moyennant des procédures électroniques.

Aussi bien dans le cas de résistances de calibrage que dans celui de résistances d'identification, la fonction de ce composant est de permettre la lecture du courant pompé, c'est pourquoi, en règle générale, deux Sondes d'une même référence n'ont pas à inclure la même résistance.

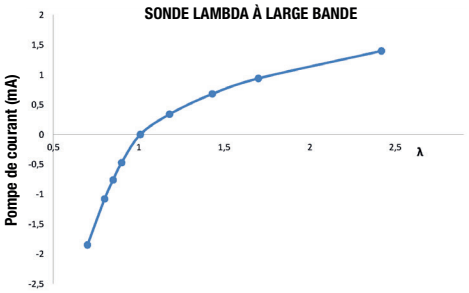

Figure 11. Réponse électrique en fonction du paramètre Lambda.

INFORMATION TECHNIQUE

TYPES DE SONDE LAMBDA À LARGE BANDE

En plus de la résistance incluse dans le connecteur des Sondes, nous pouvons les classer aussi en fonction de la présence ou de l'absence d'un canal de référence. Il existe deux types de Sondes à Large Bande :

-Les Sondes à Large Bande de première génération contiennent un canal de référence d'air extérieur similaire à celui des Sondes Lambda binaires au zirconium. Toutes les Sondes de première génération incorporent une résistance de calibrage dans le connecteur.

-Les Sondes à Large Bande de seconde génération n'ont plus besoin de ce canal de référence pour fonctionner. Par rapport à celles de première génération, l'absence de canal permet une économie de puissance consommée par ces sondes, le temps de chauffage initial est inférieur et la stabilité du signal au fil de leur vie utile est supérieure. Les Sondes de seconde génération peuvent inclure des résistances de calibrage ou d'identification dans le connecteur, ou n'en incorporer aucune.

En fonction de l'application de chaque véhicule, une Sonde à Large Bande de première ou de seconde génération est nécessaire, avec ou sans résistance dans le connecteur, sans qu'elles puissent être échangées entre elles. L'intervalle de changement est tous les 160.000 km.

SONDES LAMBDA RAPPORT AIR/CARBURANT A/F

Il s'agit de sondes large bande à 4 fils, qui fournissent un signal proportionnel *(figure 11)* par rapport à la valeur lambda détectée, mais avec une seule cellule électrochimique. Cette cellule est régulée par l'électronique du véhicule et réagit en fonction de la quantité d'oxygène présente dans les gaz de combustion simultanément. L'opération combinée fournit un courant caractéristique correspondant aux différentes compositions de gaz dans le tuyau d'échappement sans qu'il soit nécessaire de procéder à un étalonnage individuel préalable. Le courant qu'il génère est positif pour les mélanges pauvres, ce courant est capable de mesurer très précisément la composition du gaz et est sensible aux mélanges riches et sans oxygène.
En étant capables de générer du courant dans le sens inverse, ils conviennent aussi bien aux moteurs diesel qu'aux moteurs à essence.

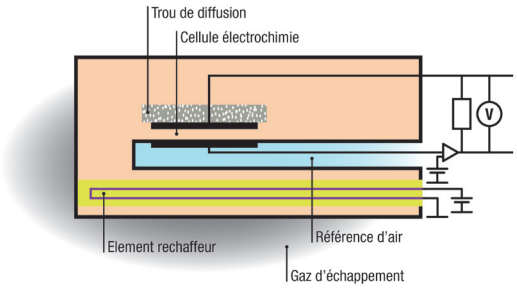

Figure 11. Vue en section du capteur et mode de fonctionnement.

Cette sonde est équivalente à une sonde Large Bande à 5 fils en termes de réponse, car le signal qu'elle donne est proportionnel à la Sonde Lambda, elle permet également un contrôle plus efficace des émissions, cependant, contrairement à la sonde à 5 fils, cette sonde ne nécessite qu'une seule cellule électronique, ce qui signifie une utilisation moindre de platine.

Chez **FAE**, nous concevons et fabriquons nos propres matériaux.

Pour ce nouveau capteur, nous avons créé de nouveaux matériaux qui sont reproduits lot après lot sans changer aucune caractéristique.

Notre capteur a une conception robuste et fiable, qui est soumise à des tests très exigeants tels que : choc thermique avec des changements de température drastiques, fatigue de l'élément chauffant avec une mise en marche et un arrêt continus, test de durée de vie avec des conditions de fonctionnement extrêmes, test fonctionnel du courant et du signal, test d'isolation électrique, test de stabilité du signal, etc.

Nous vérifions la résistance thermique avec et sans condensation d'eau, nous effectuons également des tests de durée de vie des différents composants du capteur, en reproduisant le fonctionnement dans une voiture.
D'autre part, nous effectuons des tests d'étanchéité, des tests de contamination par un agent chimique ou par un environnement salin, etc.

Une fois que le capteur est monté sur une sonde complète, nous effectuons le test de durée de vie sur un banc moteur, où les sondes fonctionnent pendant des milliers d'heures, et nous effectuons également le test sur des véhicules réels qui accumulent des milliers de kilomètres.

Les tests en laboratoire sont effectués pendant plus de 2 000 heures. Le kilométrage dans les applications réelles est d'environ plus de 200 000 km dans différents véhicules pour assurer la compatibilité du capteur avec les applications et ainsi offrir au marché un produit 100% fiable et hautement résistant.

Recommandations :
*Avant d'installer la Sonde Lambda, assurez-vous d'utiliser la bonne référence pour votre véhicule.
*Ne pas installer la sonde d'oxygène si elle a été frappée.
* Il est recommandé de contrôler ou de remplacer les Sondes Lambda après une collision importante.

INFORMATION TECHNIQUE

INSTALLATION DES NOUVELLES SONDES LAMBDA

L'installation des Sondes Lambda est rapide et très simple. Rappelez-vous que, pour effectuer cette opération, vous devez attendre que le moteur soit complètement froid ou bien prendre davantage de précautions dans la mesure où les Sondes Lambda atteignent des températures très élevées et où vous encourez le risque des brûlure. L'installation demande l'imprégnation du filet avec une graisse spéciale. Cette graisse facilitera le démontage et empêchera que la Sonde Lambda reste soudée au tube d'échappement à cause des conditions extrêmes de travail. Les Sondes Lambda **FAE** portent déjà la graisse distribuée par le filet, cependant il est convenable de s'en assurer.

Le serrage de la Sonde Lambda est un autre aspect important, faites-le suivant les instructions à continuation. Veuillez noter que l'excès de serrage peut déformer le filet:
- Sonde Lambda M18: Enfoncez la Sonde Lambda avec les doigts jusqu'au bout, puis serrez fort avec la clé appropriée. Serrez 1/2 - 3/4 tour (35-45 Nm).
- Sonde Lambda M12: Enfoncez la Sonde Lambda avec les doigts jusqu'au bout, puis serrez fort avec la clé appropriée. Serrez 1/2 -1 tour (18-23 Nm).

Comment installer une Sonde Lambda Universelle?

Pour installer la Sonde Lambda Universelle **FAE**, veuillez suivre les indications suivantes :
1- Débranchez la batterie. Débranchez le connecteur de la Sonde Lambda à remplacer (celle qui se trouve dans la voiture).
2- Coupez les câbles de la Sonde Lambda que vous venez d'enlever, en séparant le connecteur du reste de la Sonde Lambda et en s'assurant de laisser suffisamment de câble pour réaliser l'épissure par la suite.
3- Enlevez l'isolant, selon la longueur indiquée et en prenant soin de ne pas abîmer le noyau métallique du câble.
4- Introduisez les câbles dénudés du connecteur à l'intérieur des douilles de la nouvelle Sonde Lambda **FAE** en faisant bien attention de bien respecter les couleurs des câbles.
5- Aplatissez les douilles. Appliquez de la chaleur sur la gaine thermo-rétractile de la douille afin que le raccordement entre le connecteur récupéré et la nouvelle Sonde Lambda soit bien fixe, hermétique et étanche.
6- Une fois ces opérations terminées, vous pouvez installer la Sonde Lambda **FAE** sur votre véhicule.

Comment s'installe une Sonde Lambda Spécifique?

- Avant d'installer la Sonde Lambda, assurez-vous que la référence est celle appropriée à votre véhicule.
- N'installez pas la Sonde Lambda si celle-ci semble endommagée.
- Débranchez la batterie.
- Débranchez le connecteur de la Sonde Lambda à remplacer (celle qui se trouve dans la voiture).
- Placez en premier lieu la sonde à son emplacement en veillant à ce que le câble ne soit pas tordu, plié ni coincé.
- Serrez la Sonde Lambda en suivant les instructions suivantes:
  Sonde Lambda M18: Enfoncez la Sonde avec les doigts jusqu'au bout, puis serrez fort avec la clé appropriée. Serrez 1/2-3/4 tour (35-45 Nm).
  Sonde Lambda M12: Enfoncez la Sonde avec les doigts jusqu'au bout, puis serrez fort avec la clé appropriée. Serrez 1/2-1 tour (18-23 Nm).
- Branchez et placez le câble tel qu'il était installé à l'origine, en veillant à ce qu'il ne soit pas trop près du collecteur d'échappement ou de tout autre composant chaud du moteur.

Comment tester les Sondes Lambda?

Pour vérifier le bon fonctionnement d'une Sonde Lambda sans la démonter du véhicule, vous devez disposer d'un oscilloscope. Veuillez-vous assurez que le moteur a été réglé conformément aux indications du fabricant pour procéder au chauffage du moteur. Branchez la sortie du capteur à l'entrée de l'oscilloscope, à l'aide du système de connexion approprié, sans débrancher la Sonde Lambda de l'ECU de la voiture. Une fois ces branchements effectués, si la Sonde Lambda fonctionne correctement, le signal affiché par l'oscilloscope variera rapidement et de manière constante entre 0,2 V (mélange faible) et 0,8 V (mélange riche).

Un autre facteur très important, à bien de prendre en compte, est le temps écoulé entre le passage d'une tension à une autre, qui doit être d'environ 300 millisecondes. Le temps écoulé entre le passage de mélange faible à riche et le passage de mélange riche à faible doit être le même ou similaire. Si le signal produit par le capteur est constant ou que le temps de réaction au changement de richesse du mélange est trop lent, cela signifie que vous devez remplacer la Sonde Lambda. Il est conseillé de réviser le fonctionnement de celle-ci chaque fois que vous effectuez un réglage du moteur et toujours avant de réaliser les tests d'émissions. Rappelons qu'un fonctionnement lent du capteur affecte directement la consommation de notre véhicule, par conséquent, le remplacement du capteur usé par un nouveau sera rapidement amorti par la réduction de la consommation de carburant.

VISUAL INSPECTION / FAILURE CAUSES

Verify that the connector and the cable are visually in good condition.
Also verify if the body of the **Oxygen Sensor** shows any dents or signs of being hit that could have caused damage.
It is necessary to consider, as a normal guideline, that a visual inspection is not enough to be certain that the **Oxygen Sensor** is working properly. Besides the recommendations made above, we should also pay attention to the condition of the protection tube to have an indication of the possible problem.

1) **Oxygen Sensor** damaged by excess lead in the emission gases.
2) **Oxygen Sensor** damaged by coolant leaks.
3) **Oxygen Sensor** damaged due to an air / fuel mixture that is excessively rich.
4) **Oxygen Sensor** damaged by high engine oil usage.
5) **Oxygen Sensor** damaged due to contamination from silicon in the emissions gases.

Remember that anytime you encounter one of these situations you should replace the **Oxygen Sensor**.
Installation of a specific **FAE Oxygen Sensor**:
- Before installing the **Oxygen Sensor** make sure that you are using the appropriate reference indicated by your vehicle's manufacturer.

INSPECCIÓN VISUAL / CAUSAS DE FALLO

Debe verificarse el conector y el cable asegurándose de su buen estado.
Compruebe también si el cuerpo de la **Sonda Lambda** muestra alguna abolladura o señal de algún golpe que pudieran haberla deteriorado.
Hay que tener en cuenta que, como norma general, una inspección visual no es suficiente para poder asegurarse del buen o mal funcionamiento de nuestra **Sonda Lambda**, pero de todas formas, además de las recomendaciones comentadas con anterioridad, también podemos fijarnos en el aspecto del tubo protector del elemento sensor, para tener alguna indicación del posible problema.

1**) Sonda Lambda** dañada por un exceso de plomo en las emisiones de gases.
2) **Sonda Lambda** dañada por contaminación con anticongelante.
3) **Sonda Lambda** dañada por una mezcla aire-combustible excesivamente rica.
4) **Sonda Lambda** dañada por un elevado consumo de aceite.
5) **Sonda Lambda** dañada por contaminación de silicio de las emisiones de gases.

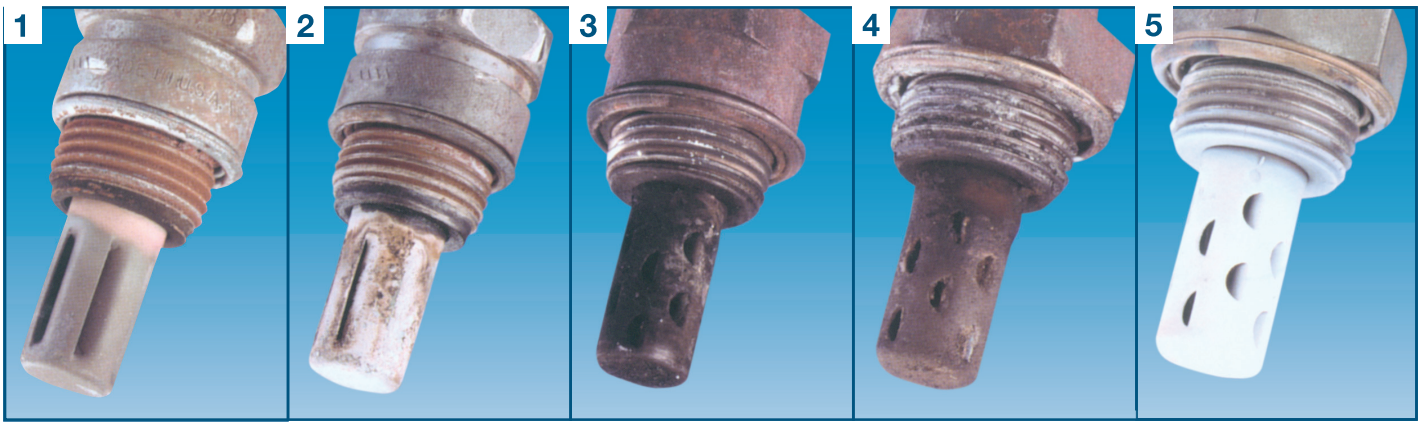

Recuerde que, siempre que se encuentre con cualquiera de estas situaciones, debe reemplazar la **Sonda Lambda**.
Instalación de una **Sonda Lambda FAE** específica:
- Antes de instalar la **Sonda Lambda**, asegúrese de que está utilizando la referencia apropiada para su vehículo.

CONTRÔLE VISUEL / CAUSE DE LA DÉFAILLANCE

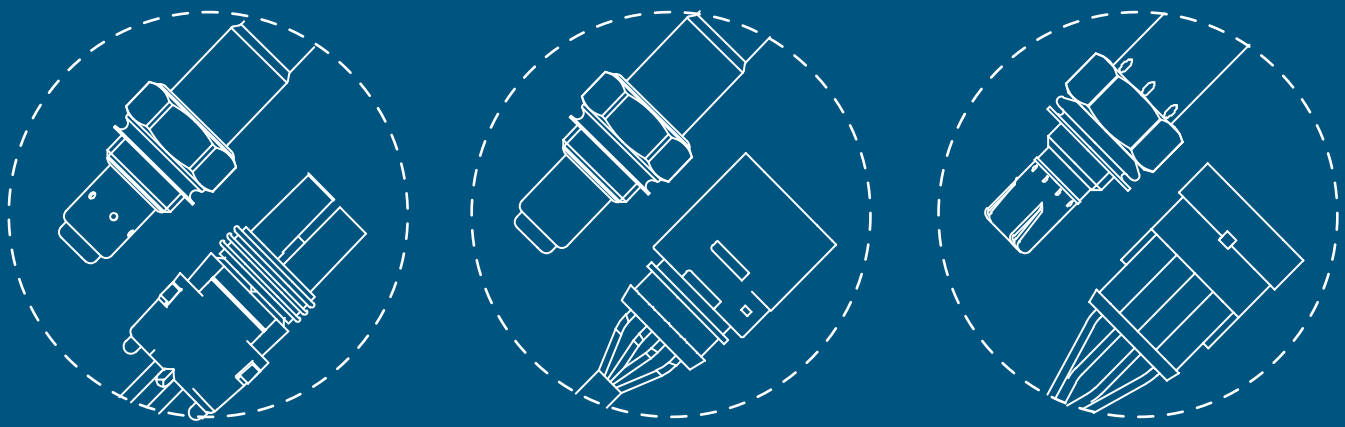

Vérifiez le connecteur et le câble et assurez-vous qu'ils sont en bon état.
Vérifiez également que le corps de la **Sonde Lambda** ne présente aucune bosse ou marque de choc qui pourrait l'avoir endommagé.
Il faut savoir qu'en général, un contrôle visuel n'est pas suffisant pour garantir le bon ou mauvais fonctionnement d'une **Sonde Lambda**. Toutefois, outre les recommandations fournies ci-dessus, il est également possible d'inspecter l'aspect du tube protecteur du capteur afin d'obtenir une éventuelle indication du problème.

1) **Sonde Lambda** endommagée par un excès de plomb dans les émissions de gaz.
2) **Sonde Lambda** endommagée par contamination avec le fluide anti glace.
3) **Sonde Lambda** endommagée par une mixture air-carburant trop riche.
4) **Sonde Lambda** endommagée par une consommation élevée d'huile.
5) **Sonde Lambda** endommagée par pollution au silice des émissions de gaz.

Souvenez-vous qu'à chaque fois que vous vous trouverez dans l'une ou l'autre de ces situations, vous devrez remplacer la **Sonde Lambda**.
Installation d'une application spécifique du **Sonde Lambda FAE** :
- Avant d'installer la **Sonde Lambda** assurez-vous que celle-ci est brei la référence adéquate conecte indiquée pour le fabricant de votre véhicule.

INFORMATION / INFORMACIÓN / INFORMATION

G.B.

This catalog considers vehicles with:

- Left Hand Drive (L.H.D.).
- Manual Gear, 5 speed.
- Without Air Conditioning.
- Without Check Control.
- Without Cruise Control.
- Without ABS.

As the Standard vehicle (generic).

Vehicles with different features (criteria) are treated in a specific way in the information column.

E

En este catálogo se han considerado los vehículos con:

- Conducción a la izquierda (L.H.D.).
- Cambio Manual, 5 velocidades.
- Sin Aire Acondicionado.
- Sin Check Control.
- Sin Cruise Control.
- Sin ABS.

Como el vehículo Standard (genérico).

El resto de vehículos con otras características (criterios) se tratan de forma específica en la columna de información.

F

Dans ce catalogue sont considérés les véhicules avec:

- Conduction à gauche (L.H.D.).
- Avec boîte de vitesses manuelle, 5 vitesses.
- Sans Air Conditionné/Climatisation.
- Sans Tableau de Contrôle.
- Sans Vitesse de Croisière.
- Sans Antiblocage (ABS).

Comme le véhicule Standard (générique).

Le reste des véhicules avec d'autres caractéristiques (critères) sont abordés d'une façon spécifique dans la colonne d'information.
